The ESG Yearbook 2022

1,000 INDICATORS

14,000 CALCULATIONS PER COMPANY

19,14,000 INDICATORS COLLECTED

# **FOREWORD**

ESG as a concept has moved beyond the Boardrooms and from good to have, to one of the key differentiators — not only for investors and lenders but also for the corporates. As more and more economies are waking up to the adverse effects of climate change, poorly governed businesses, labour unrest, human rights violations, the effect of the pandemic on employment quality, etc. ESG assessments are clearly the tool to monitor the transition towards sustainability and India is not far behind in making this transition. The BRR and subsequently the BRSR guideline issued by the SEBI for the top 1000 listed companies is a landmark step in the journey.

ESGRisk.ai, India's first ESG Rating Provider and a wholly owned subsidiary of Acuité Ratings & Research, aids this process. We assess companies based on the disclosures made by them and provide independent and unbiased ESG ratings, based on an objective framework to measure their relative performance within and across industries. ESGRisk.ai has aimed to bring discipline to an area that is struggling with a lack of standardisation, common benchmarks, and quality data. Our ESG Assessments provide corporates not only the option to monitor where they are through comprehensive assessments which consider over 1000 indicators but also provide them with relevant Indian and global benchmarks.

Through the Yearbook we bring to you a comprehensive ESG analysis of the top 1000 NSE Listed companies across 54 sectors. It also contains the list of the 21 award winners as a part of the second edition of our annual awards ceremony - ESG India Leadership Awards 2022. The ESG Yearbook is an interesting read not just for ESG experts but for investors, the financing community, business leaders, government institutions, and think tanks. India still has a long way to go to tap into its potential as an ESG-forward country but according to our estimates, the AUM invested into ESG funds is expected to grow by 30% which is quite a figure to look forward to.

Hope we are able to add value through this publication. Please share your reviews at <a href="mailto:knowledge@esgrisk.ai">knowledge@esgrisk.ai</a>

- Mr. Sankar Chakraborti, Chairman, ESGRisk.ai, Group CEO, Acuité

# INTRODUCTION

ESG Risk Assessments and Insights Limited (ESGRisk.ai) is India's first ESG Rating Provider and the first to be empanelled with Association of Mutual Funds in India (AMFI) for ESG ratings of mutual funds. We have adopted an India specific assessment framework aligned with global ESG assessment standards. The company is a wholly owned subsidiary of Acuité Ratings and Research Limited and part of the Acuité Group. The Acuité Group comprises of three entities, Acuité Ratings & Research Limited, SMERA Gradings & Ratings Private Limited and ESGRisk.ai. Acuité Ratings & Research Limited is a full-service credit rating agency registered by SEBI and accredited by RBI that specializes in bank loan and bond ratings. SMERA Gradings and Ratings Private Limited is approved by Ministry of MSME & Government of India for the rating and grading of SME in India. ESGRisk.ai draws on Acuité Group's experience in rating of more than 9,300 companies & a total of 50,000 plus SMEs. Our objective is to provide investors, companies, governments, development agencies, and research bodies access to ESG assessments and data for Indian companies.

Sustainability has become a priority for the global society with the risk landscape changing rapidly. Frequent and intense droughts, heat waves, rising sea levels, melting glaciers, warming oceans, violation of human rights and labour strikes have paved the way for the investing community to move towards socially responsible investment practices and ethical consumerism. India is one of those countries which is going to be adversely impacted with ESG related risks because of rising population burden, dependence on agriculture and long coastline. Our honourable PM has committed India to become Net Zero by 2070 and we believe that ESGRisk.ai will catalyse this sustainable transformation by encouraging responsible businesses.

Having launched our first product in June 2021, we successfully rated top NSE 500 companies, and have since expanded our portfolio to top NSE 1000 companies. Our ESG rating is an objective, independent & unbiased opinion on a company's ability to manage future/emerging risks on Environment, Social, & Governance issues that have material financial impact. Our rating methodology evaluates a company's ESG performance across 3 categories, 19 themes, 35 key issues and 1000 indicators. Our assessments are based on company's public disclosures.

Several organizations have actively embraced ESG, but it is important that the corporate sustainability story be communicated to their stakeholders, as not only will this drive the ESG journey, but also inspire others. Our assessment indicates that the average ESG disclosure rate of NSE 1000 companies is 58%, while the highest ESG disclosure rate stands at 94%.

To celebrate the growth of Indian companies in the ESG space, ESGRisk.ai, is presenting the ESG India Leadership Awards 2022. Our 21 ESG award categories (covering Environment, Social, Governance, Transparency and overall ESG performance) ensure that organizations achieving excellence through their ESG practices are honoured. The awardees are chosen after evaluating top 1000 listed companies through a meticulous and rigorous process. A special category award for Transparency is given to the company for disclosing maximum information in terms of their sustainability practices. The awards are purely based on ESG performance of the companies and winners did not have to nominate themselves (or pay a fee) to get evaluated for the awards

# Did You Know?

### **CEMENTS**

Only top 5 cement companies disclose their progress on SOx, NOx, and PM10 emission reduction

#### **TEXTILES**

Despite 55% of companies taking measures to reduce water use, only 1 practices recycling

#### **CHEMICALS**

Only 6 out of 108 companies conduct product safely testing

51 out of 63 companies provide information on safe usage, but only 10 disclose their hazardous waste

#### **FINANCE**

Women representation in the workforce remain as low as 21%

6 on 19 companies report on scope 1 and scope 2 **GHG** emission

## **INFORMATIVE SERVICES**

**70% & 63%** of the companies comply with ISO 27000 certification and GDPR guidelines respectively

Only 2 out of 38 companies has sought GNCAP certification for its vehicles

# **POWER**

44% companies have a biodiversity restoration program and 15% have operations in **IUCN Red List.** 

#### **REAL ESTATE**

Not more than 27% of the companies promote the use of recycled material

### **METALS**

48% companies have measures to reduce SOx, NOx, VOC's and PM10 emission.

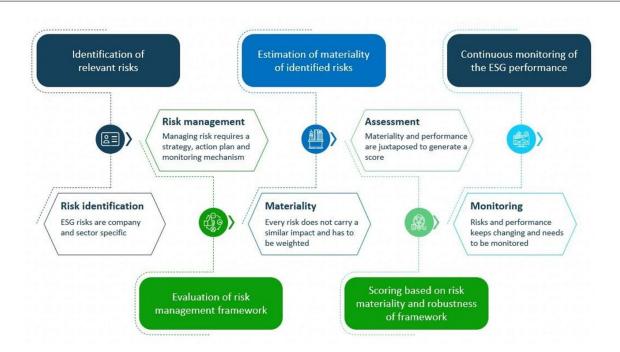

# Rating Methodology

# Comprehensive ESG assessment

<u>ESGRisk.ai's</u> ESG Ratings have been developed to help investors understand a company's ESG performance and link it to the investor's portfolio risk. Our ESG ratings are a summary of financially material ESG factors. The rating report provides the performance on all these factors. Our ratings and the rating report can be used for portfolio construction and management as well as for ESG performance comparisons and benchmarking.

### Understanding ESGRisk.ai's ESG data taxonomy

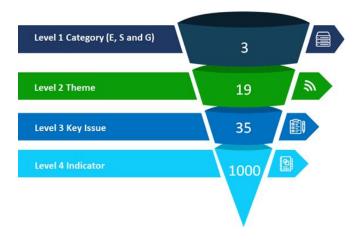

A comprehensive ESG assessment requires identifying all material ESG risks and evaluating the company's risk management practices to proactively address these risks. Since every company has exposure to a wide variety of risks and each risk impacts a company to varying degrees, the evaluation of exposure and scoring of the risk management process has to be structured in a hierarchy where individual indicators pertaining to the risk exposure and management can be aggregated to evaluate the performance. ESGRisk.ai aggregates data in three levels, viz.: The Key Issue, Theme and Category level, each of which is the next level of aggregation for hierarchical risk evaluation.

ESGRisk.ai's ESG ratings are based on three categories, 19 themes with – 9 in Environment, 4 in Social and 6 in

Governance. The performance on these 19 themes are assessed by measuring the strategy, performance and results on 35 Key Issues and ~1000 indicators. ESGRisk.ai bases its ESG assessments on company disclosures and publicly available information. Information sources such as the company's website, annual reports, CSR/sustainability reports, notice for meetings, vote results as well as local and global NGO and news websites are being used to assess the company's performance on ESG issues.

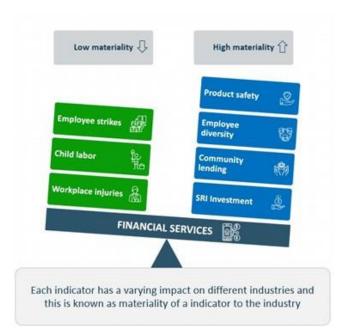

Companies with biannual reporting are rated on the basis of their last year's disclosures. However, in the following rating cycle if they do not disclose their sustainability practices, then we do not consider initiatives and strategies adopted in the previous year.

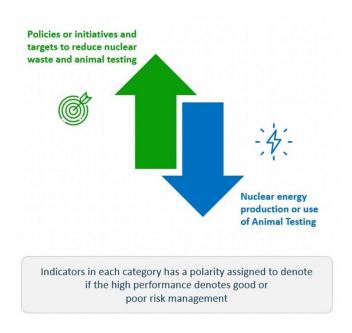

The materiality and relevance of environmental and social indicators vary across industries. Since not all indicators are relevant to every industry, ESGRisk.ai has identified the industry applicability of each indicator. Not all indicators are equally material to all industries. Hence for assessments, weights corresponding to the indicator's materiality in a specific industry are assigned. They range from very high materiality to marginal material.

ESGRisk.ai materiality and relevancy framework ensure a company's score is not negatively impacted if the company does not disclose their risk management framework on issues that are not considered material to that specific industry. Vice versa, the company's score is adversely impacted if it does not report on issues that are material.

Subsequently, indicators in each category are assigned a polarity to denote if their high-performance indicator represents good or poor risk management. For example, in the environmental category, answering "yes" to nuclear production or "yes" to animal testing in the social category have a negative polarity. However, answering "yes" to policies or initiatives and targets to reduce nuclear waste and animal testing have a positive polarity.

#### Scoring according to company's ESG disclosures and transparency

Based on the company's disclosure of indicators, ESGRisk.ai will compute and publish two transparency scores, one will score the level of overall disclosures and the second will score the BRR disclosures, relevant largely in the Indian context. Business Responsibility Reporting (BRR) transparency score is based on indicators that correspond with BRR disclosures.

# \*\*

### **Scoring negative news**

Negative news/controversies are unfailing indicators of the gaps in an issuer's risk management framework. The inability to foresee and manage a risk is starkly evident when the company faces controversies arising from its inability to address adverse events when they are encountered in the normal course of business. Negative news/controversies have varied levels of impact and the issuers themselves have varying approaches to manage adverse events. ESGRisk.ai's model evaluates the fragility of the risk management framework based on the magnitude of the controversy's impact.

### Scores - Rating Scale

Finally, based on the above steps, ESGRisk.ai assign scores and provides ratings

Scores						
High End	Low End	What the rating signifies				
Above 871		An ESG leader who is successfully managing all ESG risks				
870 721		An ESG leader reliably managing all material ESG risks				
720	571	An ESG leader with a largely positive track record of managing material risks				
570 421		A company with a good track record of risk management, but no evidence of a robust framework				
420 271		A company with a mixed track record of risk management and no evidence of a robust framework				
270	121	A company with poor track record of risk management and absence of a risk management framework				
Below 121		A company that is drastically impacted by ESG risks				

# **Award Methodology**

As we know the Corporates in India are recognising their social and environmental impact and have taken numerous initiatives to mitigate or manage ESG risks. 'ESG India Leadership Awards' — is an initiative of ESGRisk.ai to celebrate achievements in ESG risk management. To identify award recipients ESGRisk.ai employed a rigorous evaluation framework and to eliminate all bias, identified and appointed an independent jury, which was tasked to independently recommend award categories and develop the award framework.

To qualify as a Jury member, experts could not be affiliated with any of the corporates being evaluated, had to have ESG expertise and needed an understanding of the best sustainability practices across the globe.

The Jury met numerous times over a period of four weeks to finalize the methodology and identify the winners in each award category. The jury members agreed to use four sequential steps, to identify the winners.

1. In step 1, the jury identified material ESG issues for each sector and based on these material risk issues identified the award categories. Only companies exposed to a specific risk would be considered for the award. For example, Data privacy and security is not a material risk in the manufacturing sector and hence only companies in the service sector were considered for this award category. The Jury during internal discussions recognized that a few companies maybe leaders in managing multiple ESG risks and recommended category specific and overall leadership awards. The Jury members also that an award recognising transparency will encourage disclosures, and this was accepted and instituted by ESGRisk.ai.

- 2. In step 2, the Jury identified the list of companies eligible for each award category from the universe of the top 1000 listed companies (by market capitalization). In this step, the jury did not know how any company fared on their ESG risk management. The company's performance was to be evaluated only after it made the shortlist for a category.
- 3. In step 3, the ESG risk management capability of each company in the shortlist was evaluated using ESGRisk.ai's assessment framework, which considers risk management strategy, ESG initiatives targets used by the company to track their performance and the performance on their internally identified targets. Leaders in each category were identified based on their scores.
- In the final step, the leaders were screened for controversies or negative news that belies their performance in an award category.

The final list of award winners was then compiled by the Jury and presented to ESGRisk.ai's management, which also learned about the winners only from the Jury. None of the Jury members were paid by ESGRisk.ai or in any manner influenced by the companies evaluated for the awards. The awardees did not have to nominate themselves (or pay a fee) to be considered for the awards.

In summary, ESGRisk.ai's awards are not only fair, independent and unbiased, but also ascertained using a rigorous methodology applied transparently by a committee of industry experts.

# Winner – ESG India Leadership Awards 2022

Sr. No.	Themes	Award Categories	2022 Awards				
1		GHG emissions	Ambuja Cements Limited				
2		Green supply chain	Aditya Birla Fashion and Retail Limited				
3		Waste management	Mahindra Lifespace Developers Limited

Transparency scores are based on the actual disclosures by the company. The average transparency score in service industry is 63% whereas in the manufacturing sector it is 55%.

# Percentage change in transparency scores from FY19-20 to FY20-21 across industries

The above graph depicts the percentage change in transparency scores from FY19- 20 to FY20-21 across industries. Green represents an increase in transparency scores and blue represents a decrease in transparency scores as compared to the previous financial year. The transparency score of textile industry has witnessed a significant increase, followed by IT services industry and paper & paper products industry. Industries such as civil engineering, automobile, beverages, telecommunications and basic metals can disclose relevant information to improve their transparency scores.

# **Metals and Mining Industry**

#### **Basic Metals**

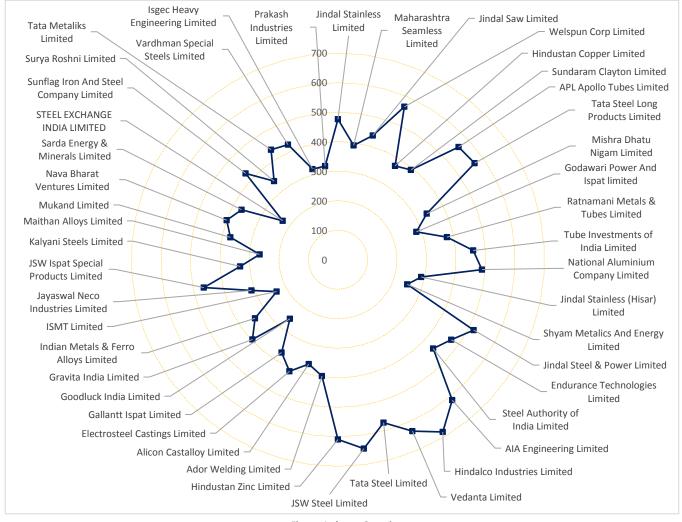

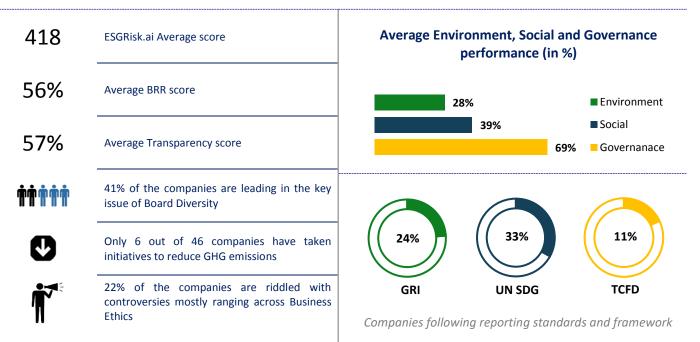

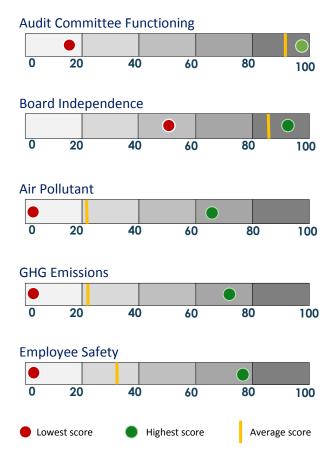

Figure: Industry Overview

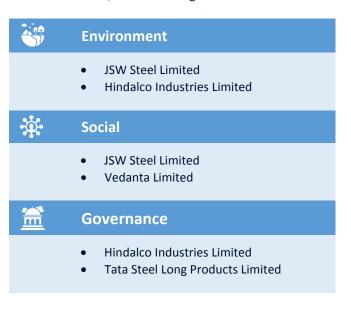

Factors such as ethical business practices, management compensation and board administration hold primary importance within this industry. Likewise, regulatory compliance and audit control are other material issues. Metal manufacturing also has a substantial environmental impact. Most of the steel is still produced with blast furnaces, releasing large amounts of greenhouse gases and other air pollutants into the air. Occupational health and safety management plays an important role in the metals industry due to exposure to hazardous chemicals, electricity, steam, working at height, working in confined spaces, etc. Community relations, inclusive development, and human rights concerns are other critical factors to consider. Furthermore, product quality, as well as supply chain management, are essential.

# Performance of material issues in Manufacturing of Basic Metals

Top performing companies based on E, S and G categories

#### **Fabricated Metals**

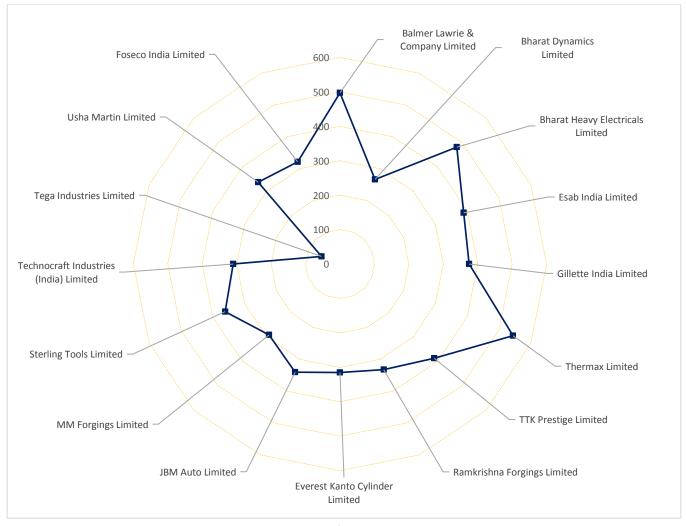

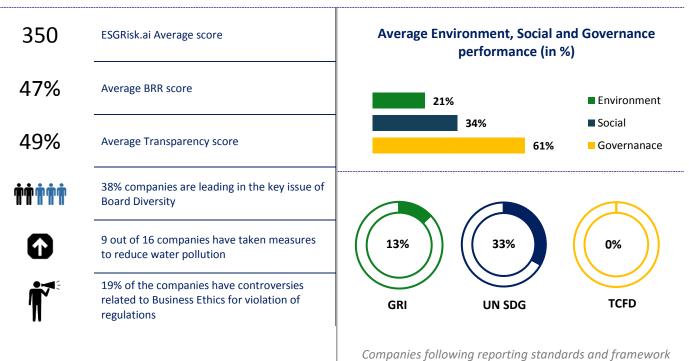

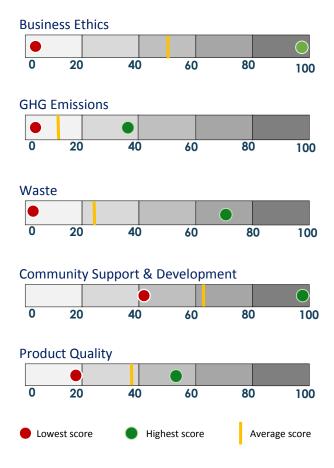

Figure: Industry Overview

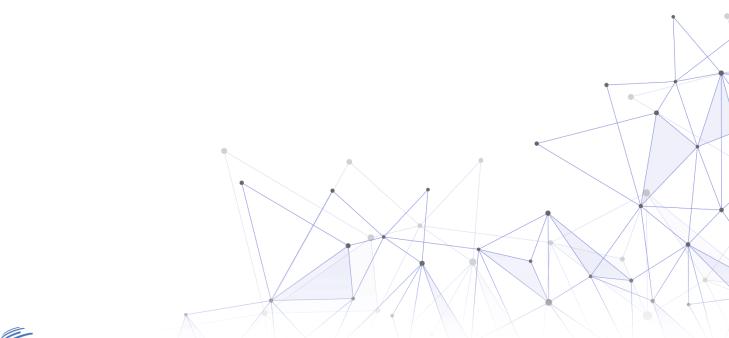

Manufacturing of fabricated metal products industry is exposed to risks associated with regulatory compliance and ethical business practices. Additionally, board oversight, committee functioning, financial audit and shareholders' rights are other material issues for this industry. The industry is also exposed to a variety of environment related risks. Material risks include releasing greenhouse gases & air pollutants. Waste management, sustainable supply chain, water & energy efficiency and resource efficiency are significant environmental issues for this industry. Occupational health & safety, product quality & safety, responsible procurement and human rights are crucial risks in the manufacturing of metal products industry.

### Performance of material issues in Fabricated Metals

# Top performing companies based on E, S and G categories

# **Mining of Metal Ores**

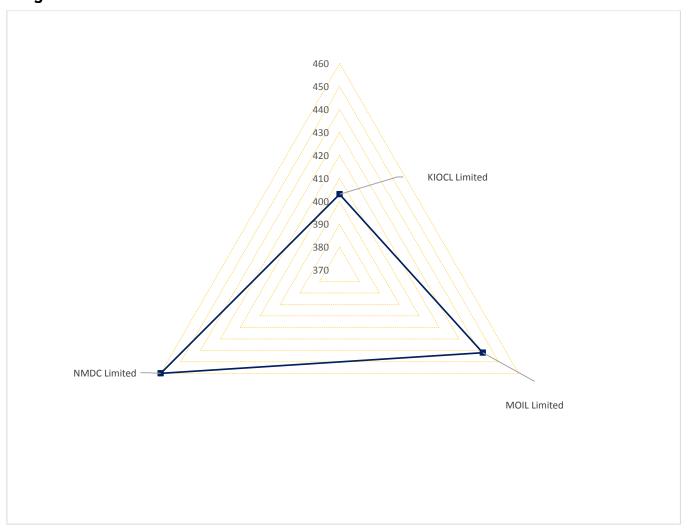

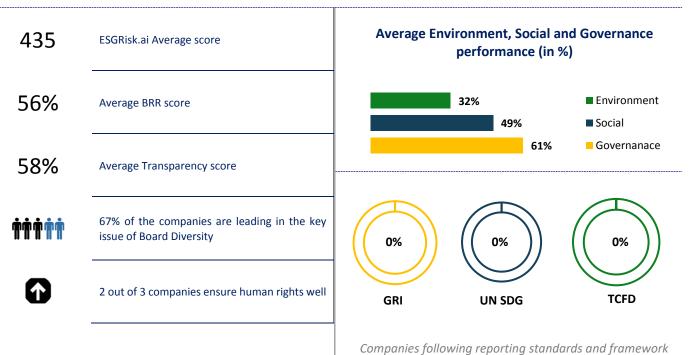

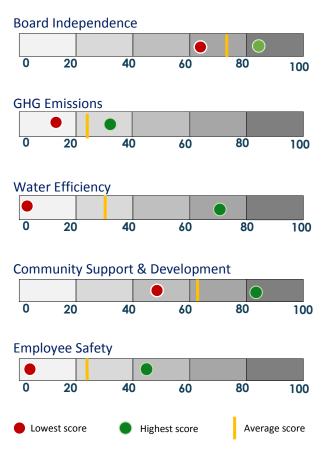

Figure: Industry Overview

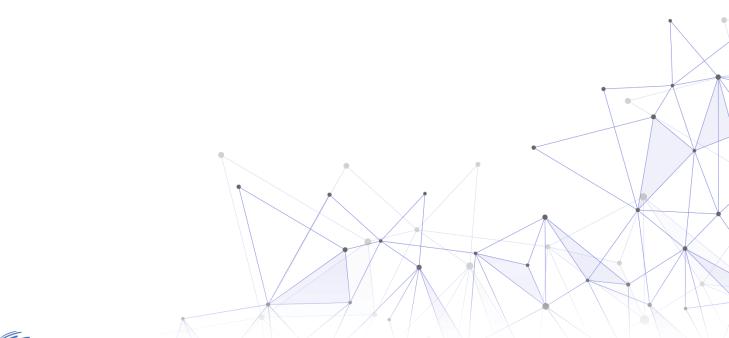

Mining has a major impact on the environment. The processes of the industry are prone to release toxic elements in its surroundings impacting land, biodiversity, and water bodies. Other issues include achieving energy efficiency while mitigating ecological impact. Health and safety management is a key risk for the mining of the metal ores industry due to the usage of large and dangerous equipment. Governance factors such as ethical business practices, legal & regulatory compliance, board & management oversight are primary risks for this industry.

# Performance of material issues in Mining of Metal Ores Industry

Top performing companies based on E, S and G categories

# **Petroleum**

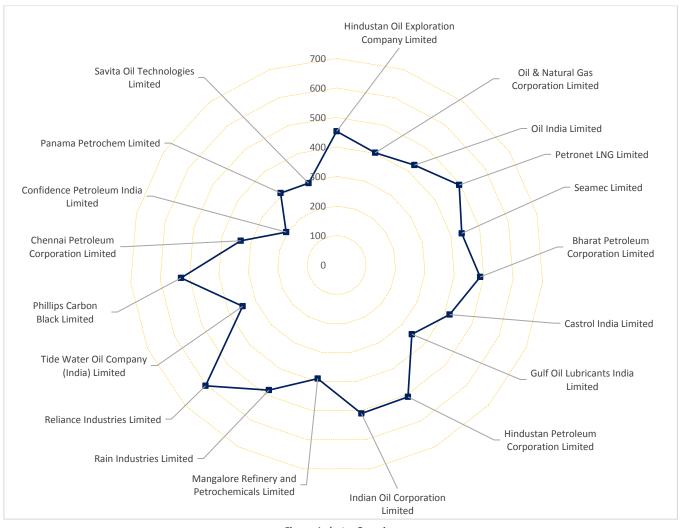

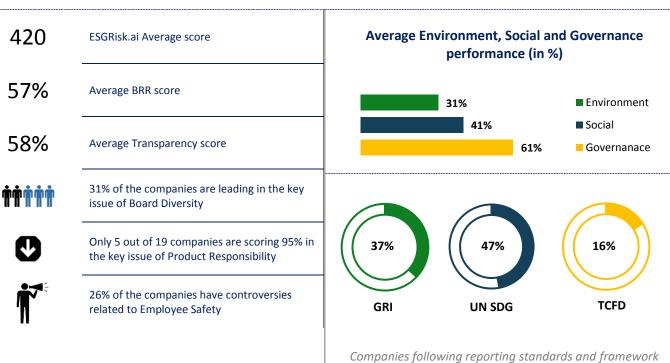

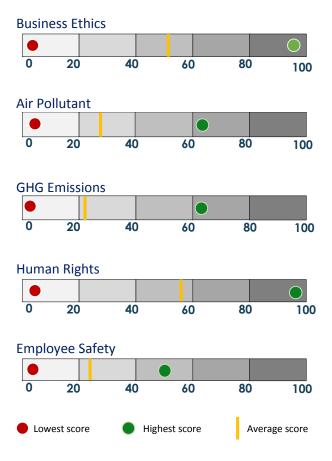

Figure: Industry Overview

The petroleum industry includes companies from exploration of crude petroleum & natural gas and refined petroleum products. The petroleum industry has a substantial environmental impact. Upstream operations of the petroleum industry can cause leaking or spilling of oil while deep sea drilling and can negatively impact the biodiversity. Toxic waste management and reducing greenhouse gas emissions as well as air pollution in the form of NOx and SOx are critical issues for the downstream operations. Labour management, occupational health and safety standards and community development are critical to improve social aspects. Following a regulatory compliance and ethical business practices are pertinent for good governance.

# Performance of material issues in Petroleum industry

Top performing companies based on E, S and G categories

### **Power**

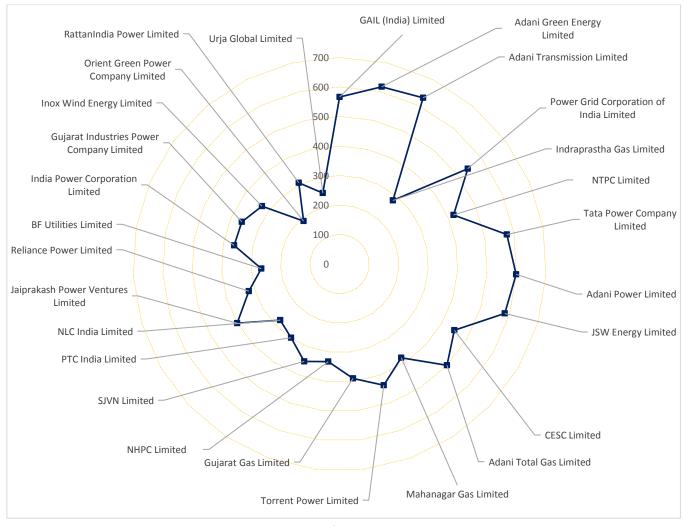

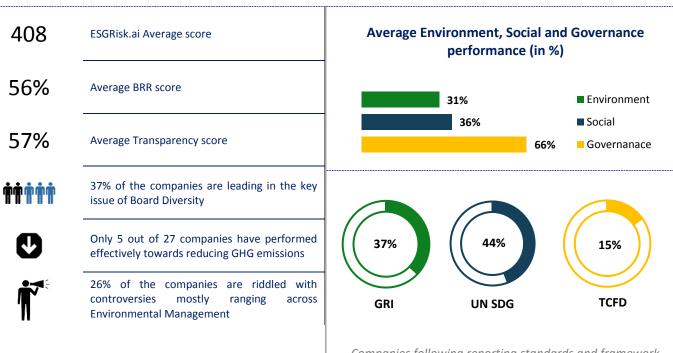

Figure: Industry Overview

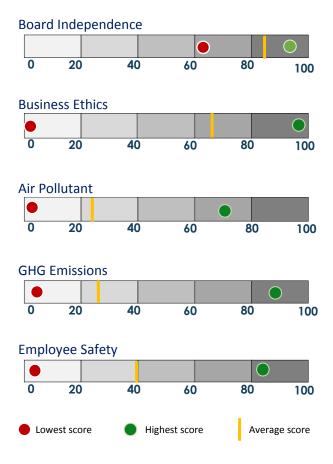

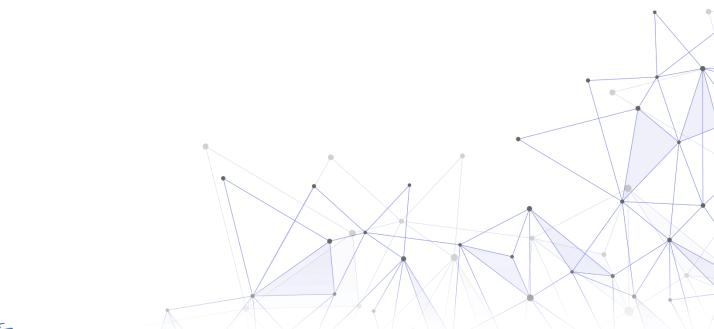

Companies in this industry operate in power generation, transmission and distribution, gas distribution and renewable energy. The power industry has a substantial environmental footprint. Thermal power generating companies emit massive amounts of greenhouse gases and have a negative impact on biodiversity in the surrounding area. Energy management and reducing air pollution in the form of NOx and SOx are important issues for the power sector. Management of labor and maintaining health and safety standards at workplace are some of the other critical issues in this industry. Regulatory compliance and ethical business practices are critical governance issues. Due to proximity to local communities, power generation often plays a key role in increasing job opportunities in the economy.

### Performance of material issues in Power

# Top performing companies based on E, S and G categories

<b>S</b> ign	Environment						
	<ul><li>GAIL (India) Limited</li><li>Adani Green Energy Limited</li></ul>

# **Textiles and Wearing Apparel**

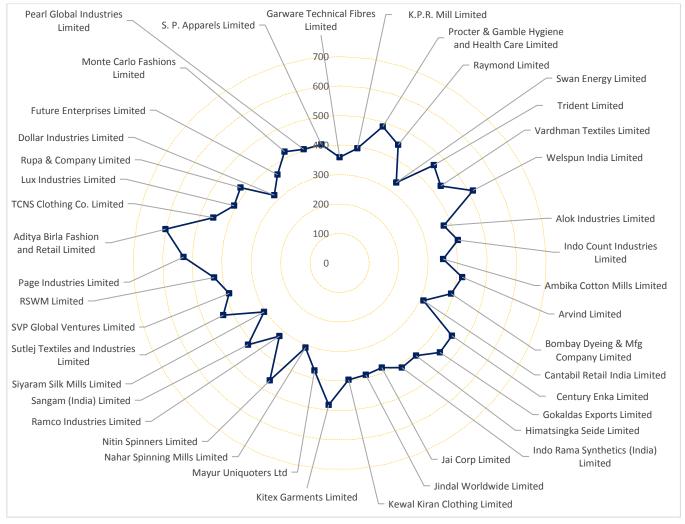

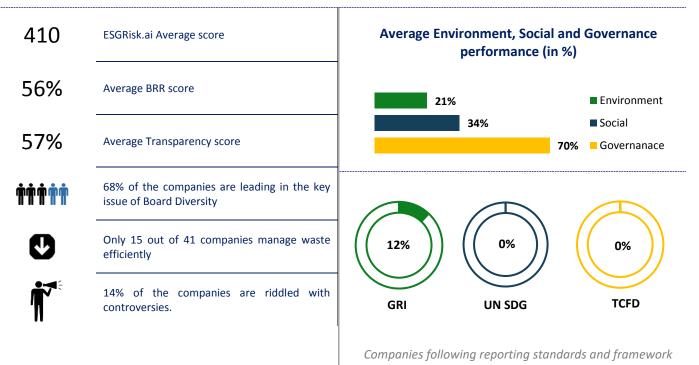

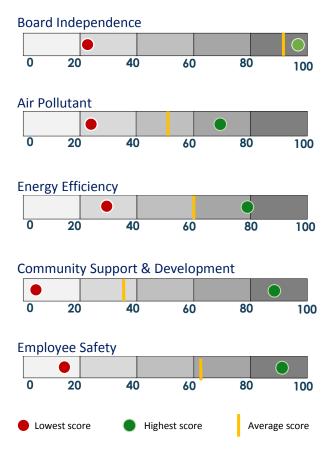

Figure: Industry Overview

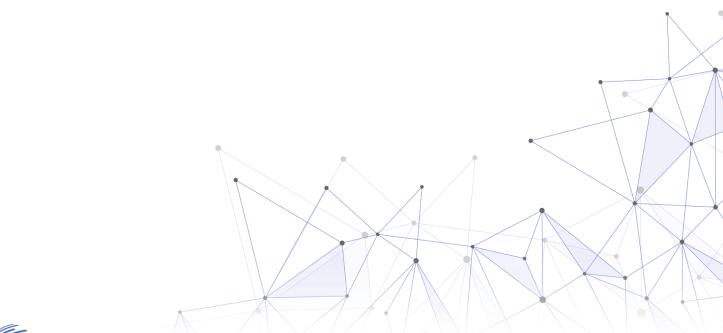

The textile industry is the second largest polluter in the world. It is responsible for almost 10% of global annual carbon emissions. The process of boiling, scouring, bleaching or dyeing requires huge amount of water, hence water management is important for this industry. Wastewater released by this industry contains toxic substances such as lead, mercury, and arsenic, among others. Occupational hazards such as use of heavy machinery and chemicals, material handling, as well as asphyxiation caused due to fibre & cotton dust inhalation make employee safety a key issue for this industry. Additionally, factors such as management compensation, board diversity and independence are material issues.

# Performance of material issues in Textiles and Wearing Apparel Industry

Top performing companies based on E, S and G categories

# **Rubber and Plastic**

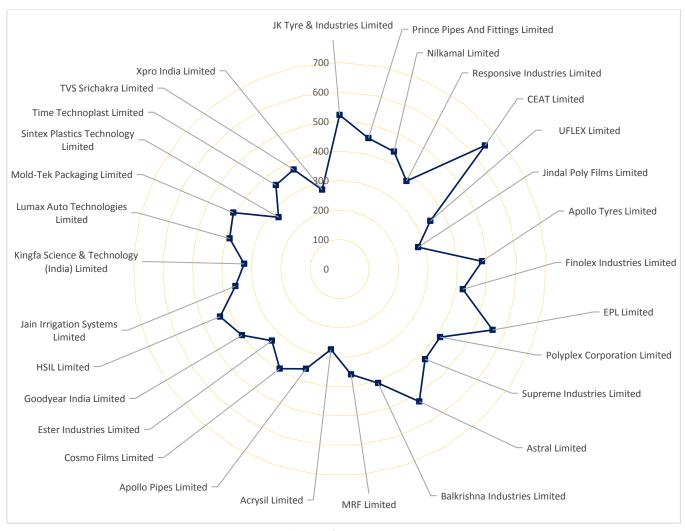

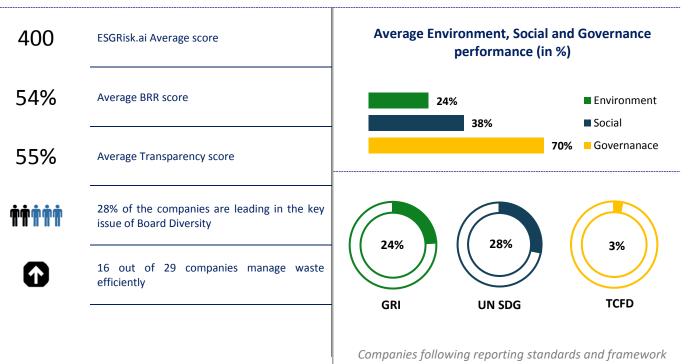

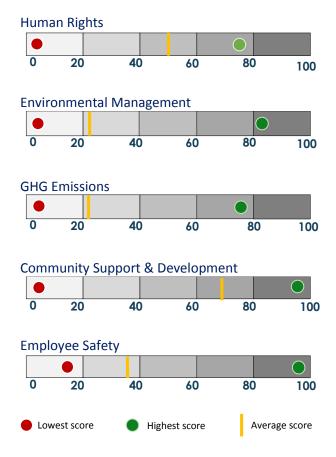

Figure: Industry Overview

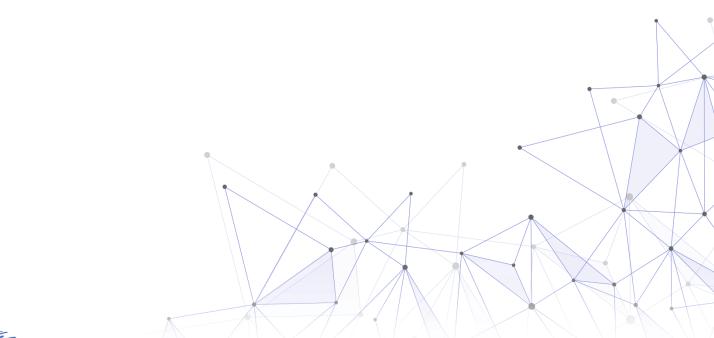

Rubber & Plastic industry is major contributor to greenhouse gas emissions. Both industrial and consumer scrap are of concern for this industry. The common waste generated are rubbers or thermoplastics. Other material issues are environmental management and community services. Occupational health and safety concerns in tyre manufacturing facilities have always been and continue to be of the utmost importance.

# Performance of material issues in Rubber & plastic industry

Top performing companies based on E, S and G categories

# **Tobacco**

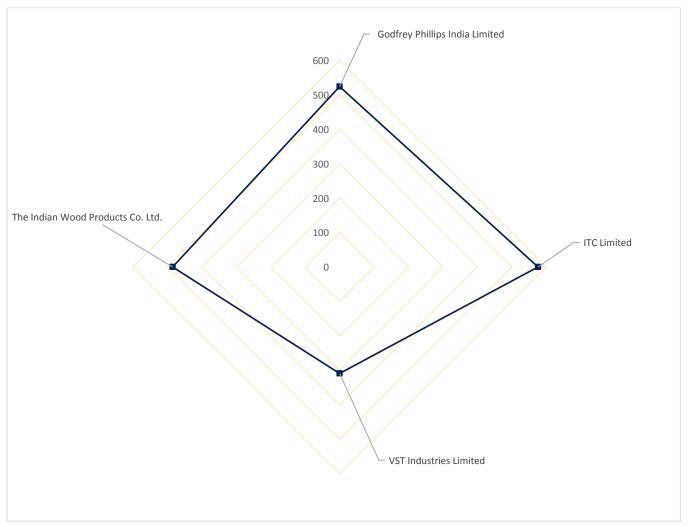

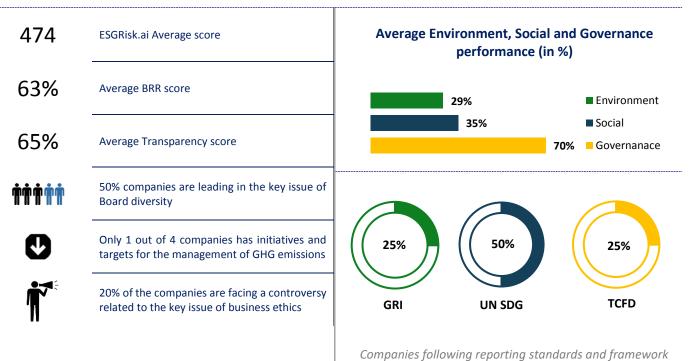

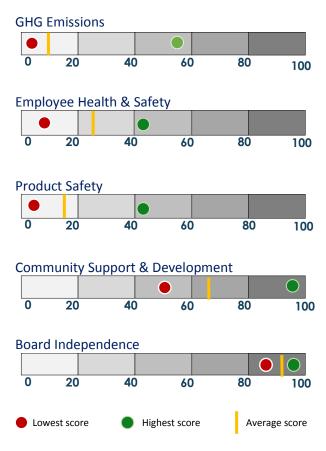

Figure: Industry Overview

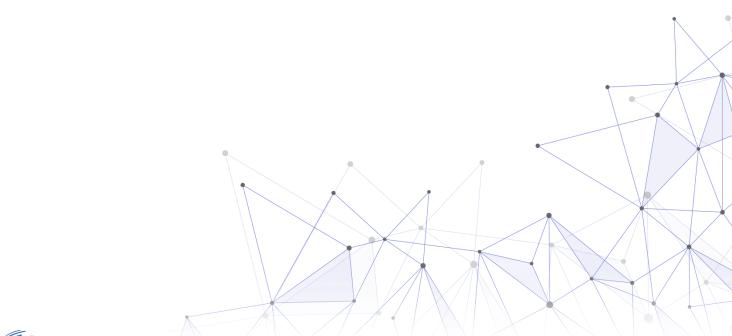

Companies in this industry are in manufacturing of cigarettes, cigarette tobacco, catechu (Katha) and chewing lime. The tobacco products industry is inherently exposed to social risks. Employee safety is a material issue for this industry as employees are primarily exposed to green tobacco sickness, hazardous chemicals and pesticides used in tobacco farms. Responsible marketing, product safety & certifications and product labelling are critical to this industry. Additionally, issues such as greenhouse gases emissions and proper disposal of waste are material. Pertinent governance issues include business ethics, management compensation and board independence.

# Performance of material issues in Tobacco industry

Top performing companies based on E, S and G categories

### Chemicals

Organic & inorganic chemicals, speciality chemicals, alkalis, agro-chemicals etc are part of chemical industry. The operation of the chemical industry has a negative impact on the environment due to the risks arising from their exposure to waste, air pollution caused by release of NOx and SOx, toxicity and hazardous elements. Health & safety of laborers, product safety and maintaining product quality are critical issues. Relevant governance issues include regulations with respect to bribery, money laundering and patent protection.

### Organic & inorganic chemicals and polymers

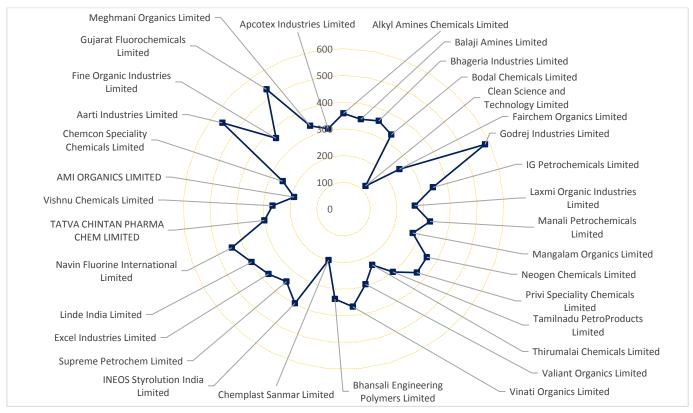

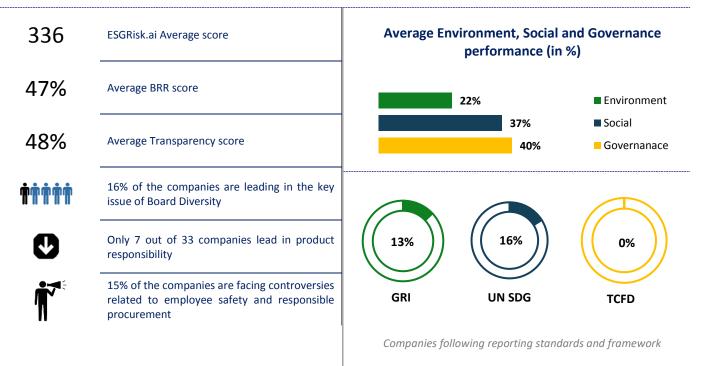

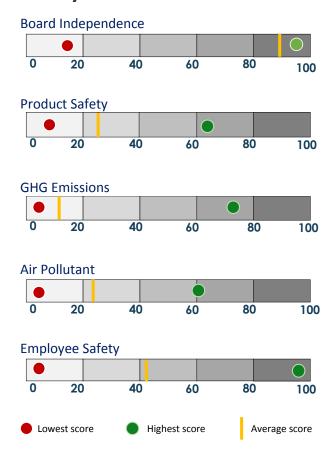

Figure: Industry Overview

### Performance of material issues in Speciality and Alkali Chemicals Industry

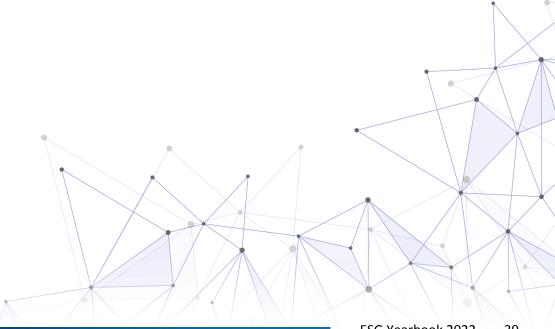

#### **Agrochemicals**

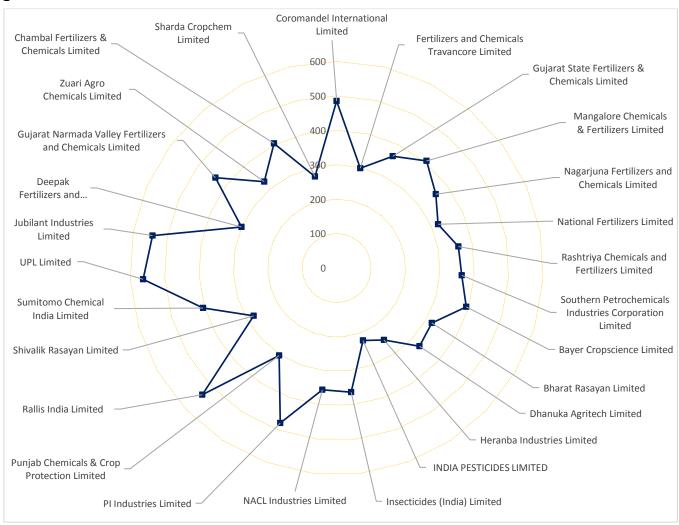

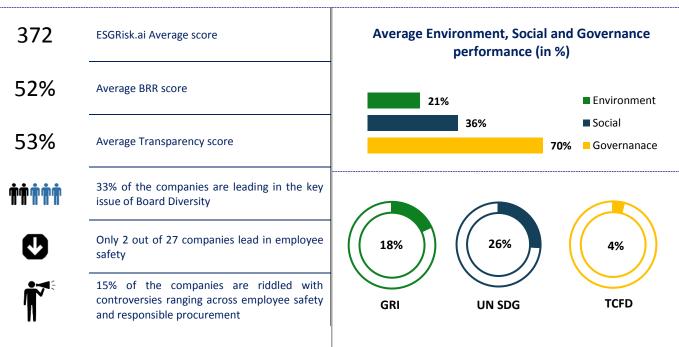

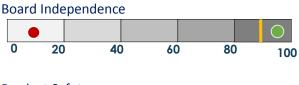

Figure: Industry Overview

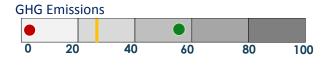

Companies following reporting standards and framework

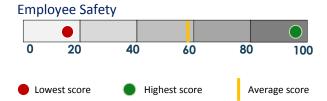

# Performance of material issues in Agrochemicals Industry

#### **Pharmaceuticals**

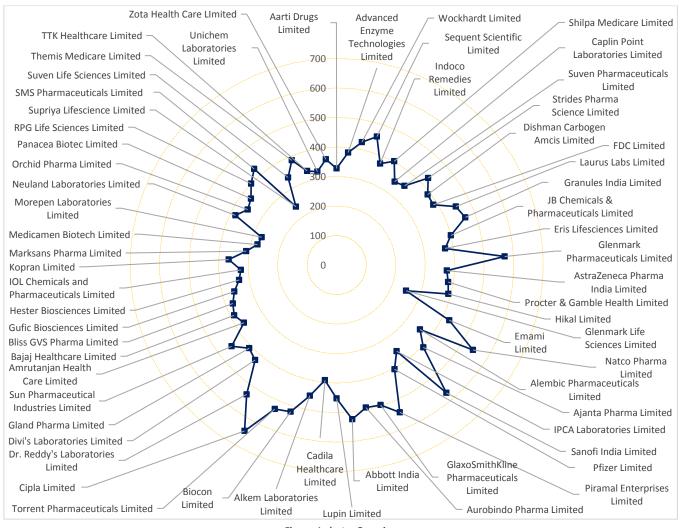

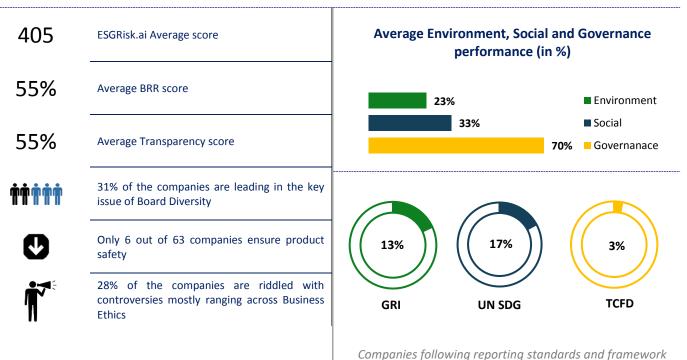

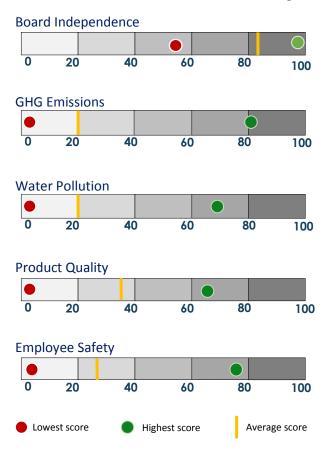

Figure: Industry Overview

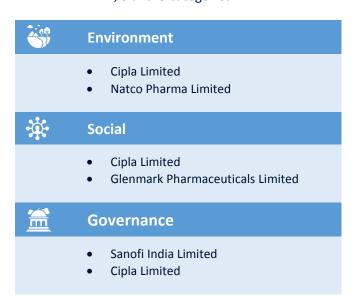

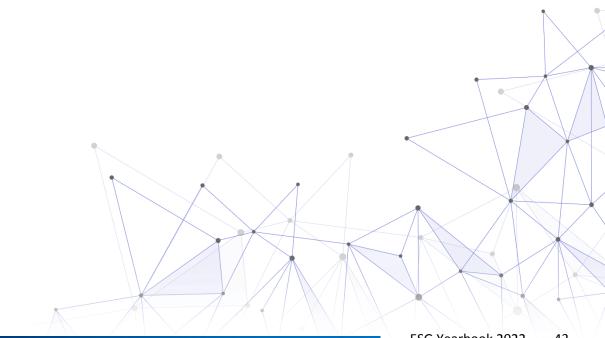

The pharmaceutical industry has a substantial impact on the social category followed by the environment category. Employee health & safety management is of primary importance to this industry. Product safety and quality are also important risks in this industry, non-adherence to these may lead to multiple recalls and consumer complaints. The pharmaceutical industry is inherently exposed to risks such as releasing greenhouse gases into the atmosphere, air impurities and polluting water bodies by releasing hazardous substances. Factors such as ethical business practices, management compensation and board administration hold primary importance for the pharmaceutical industry.

#### Performance of material issues in pharmaceutical industry

#### **Food Products**

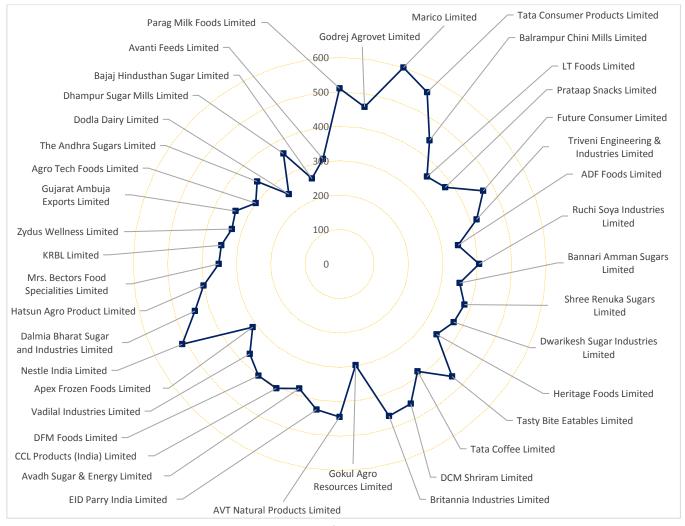

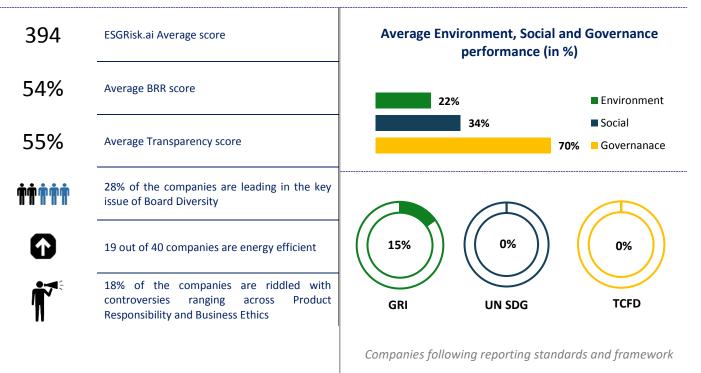

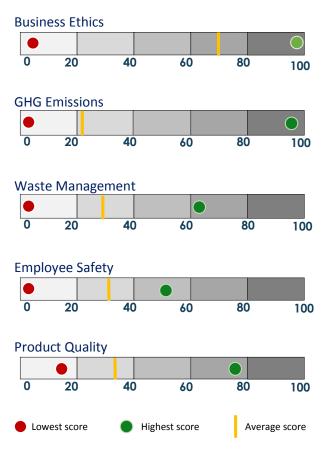

Figure: Industry Overview

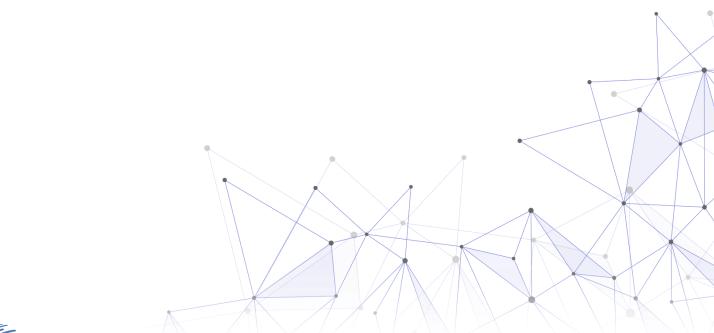

This industry consists of manufacturing of food products. The food products industry is inherently exposed to environmental risks. Each stage of this industry value chain, including food production, processing, transportation, storage, and distribution, has an environmental impact. A wide array of food processing, handling, and packaging operations creates waste. Additionally, this industry places a high value on the quality and responsibility of its products, as it significantly influences customer satisfaction and behaviour. Pertinent governance issues include ethical business practices and diversified board.

#### Performance of material issues in Food Products Industry

### **Beverages**

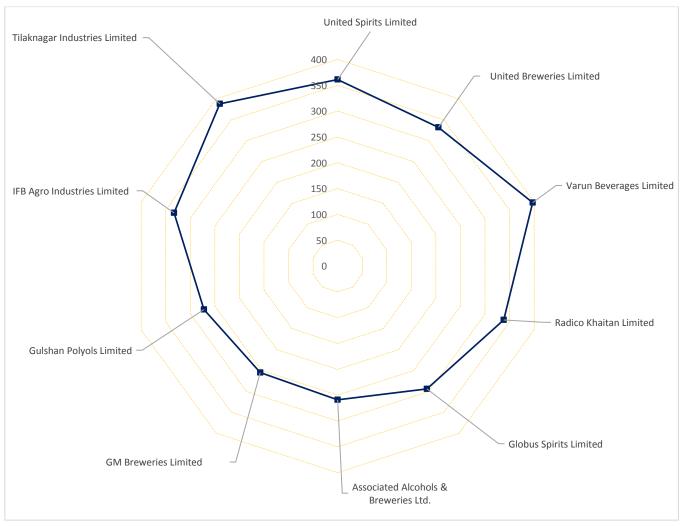

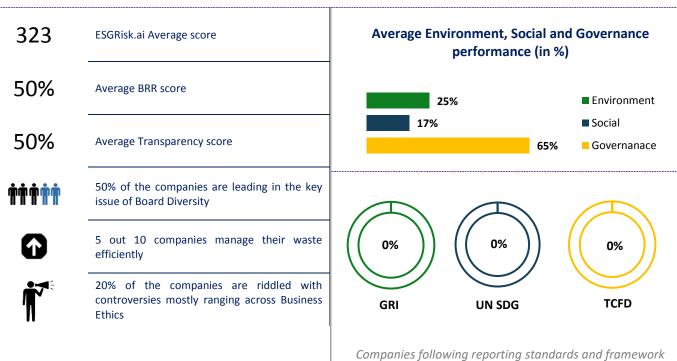

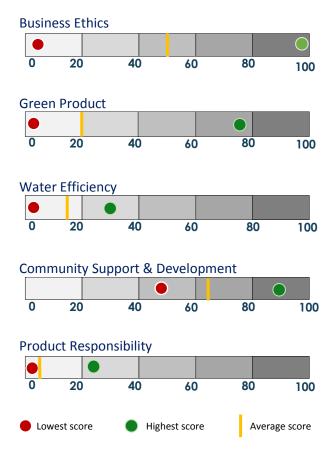

Figure: Industry Overview

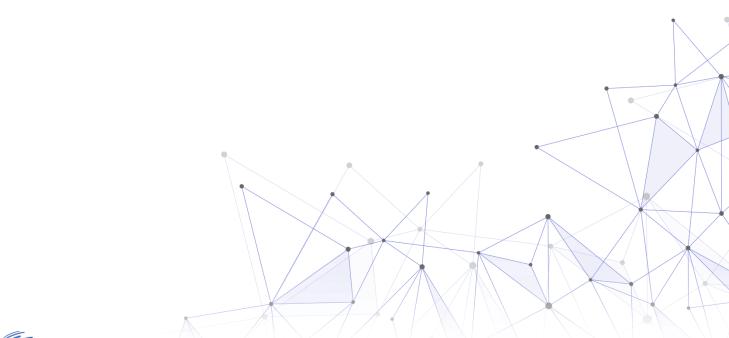

The beverage products industry is inherently exposed to environmental risks. Each stage of this industry value chain, including production, processing, transportation, storage, and distribution, has an environmental impact. A wide array of processing, handling, and packaging operations creates waste. Additionally, this industry places a high value on the quality and responsibility of its products, as it significantly influences customer satisfaction and behaviour. Pertinent governance issues include ethical business practices and diversified board.

Average BRR score

Average Transparency score

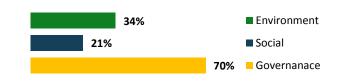

46% of the companies are leading in the key issue of Board Diversity

8 out of 11 companies manage waste efficiently

8% of the companies are riddled with

controversies mostly ranging across Business

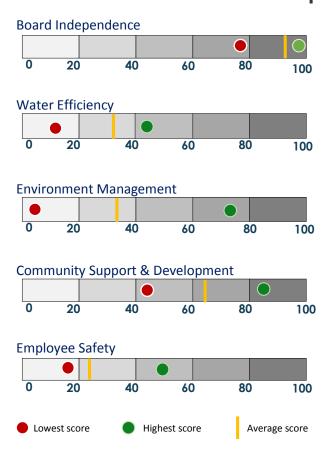

Companies following reporting standards and framework

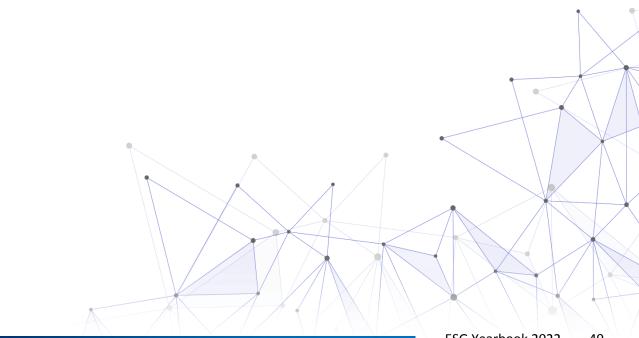

Paper has a negative impact on the environment throughout its lifecycle. Inherently, the industry is exposed to risks such as efficient utilization of water and management of water pollution. This industry is one of the largest consumer of water. Paper and pulp industries contribute greatly to deforestation and threaten some of the forest's species. Occupation and workforce health & safety management are of primary importance to this industry. Additionally, Corporate governance has a material impact on the manufacture of paper and paper products industry. Factors such as business ethics, management compensation and board oversight hold primary importance within this industry.

#### Performance of material issues in Paper and Paper Products Industry

#### **Wood and Wooden Products**

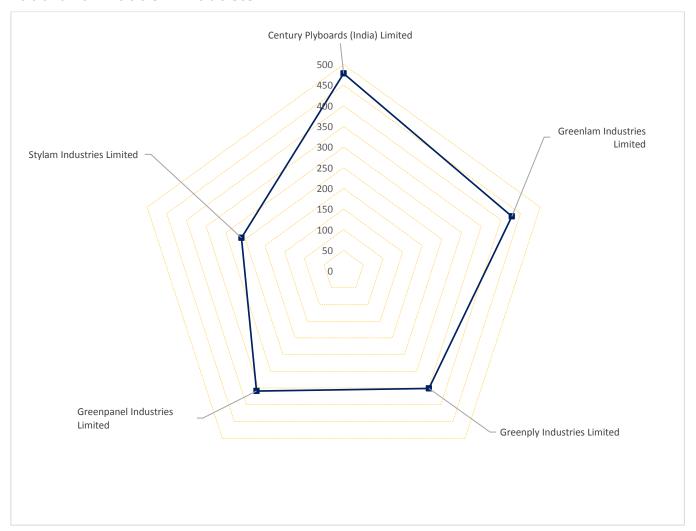

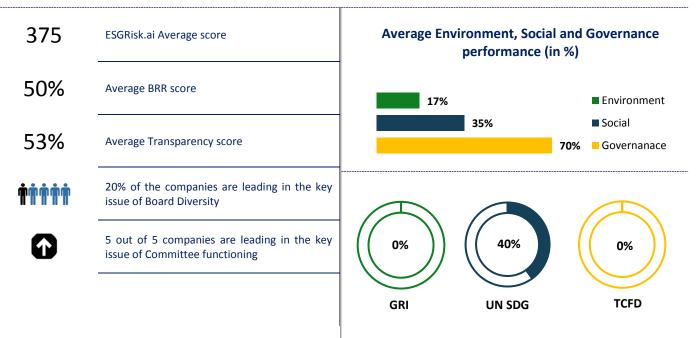

Figure: Industry Overview

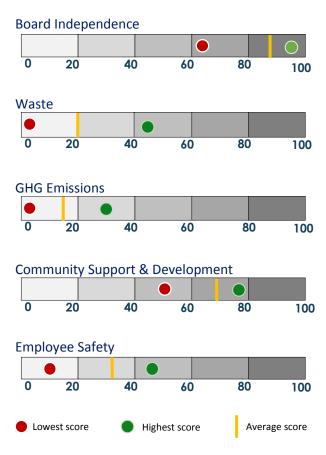

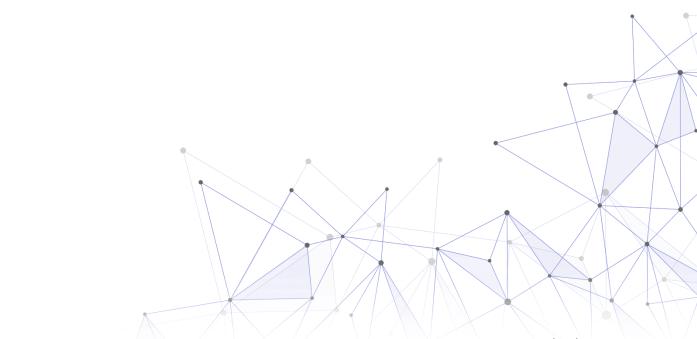

Companies following reporting standards and framework

The wood and wooden products industry consists of companies manufacturing plywood, laminboard, particle board and other plywood products. This industry is inherently exposed to environmental risks. Environmental issues primarily include solid waste disposal, air pollutant emission, veneer dryer emission, glue waste disposal and wastewater discharge. The effect caused by wood harvesting and logging, includes loss of biodiversity, soil erosion and desert encroachment. A wide array of cutting, sizing, re-sawing, edging, creates wood wastes in this industry. Waste management, reducing greenhouse gas emissions as well as air pollution are critical issues for this industry. Labour management, occupational health and safety standards and community development are important issues in the social category. Pertinent governance issues include ethical business practices, management compensation and independent board.

#### Performance of material issues in wood & wood products industry

#### Leather

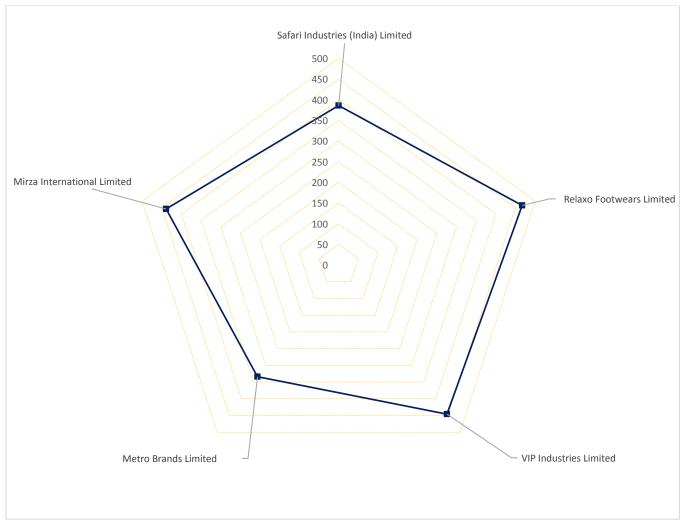

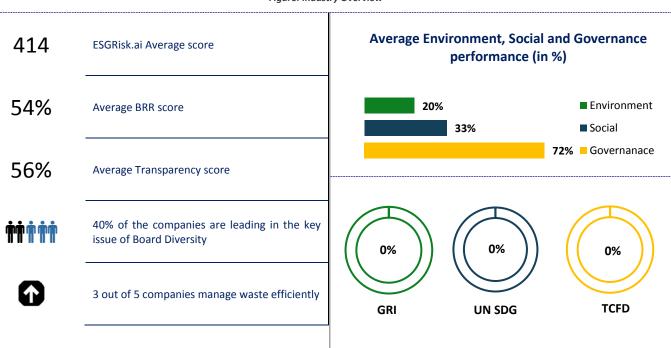

Figure: Industry Overview

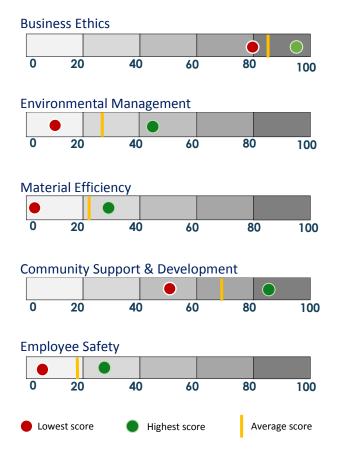

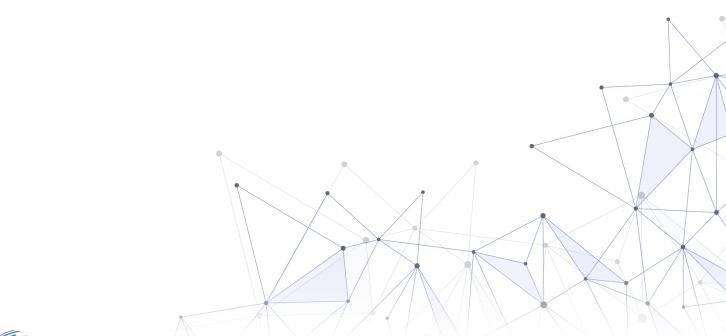

Companies following reporting standards and framework

The leather industry includes companies that manufacture luggage & travel accessories and footwears. Manufacturing of leather products has a substantial environmental impact. The tanning process is energy-intensive, and the effluent contains a high level of carbon dioxide, nitrogen oxides, and sulphur oxides. The management of waste is a critical issue for this industry since the waste produced by this industry if left untreated causes pollution problems for the environment. Labour management, occupational health and safety standards, human rights and community development are important issues in the social category. Pertinent governance issues include regulatory compliance and ethical business practices.

#### Performance of material issues in Leather industry

# **Electrical and Electronic Equipment**

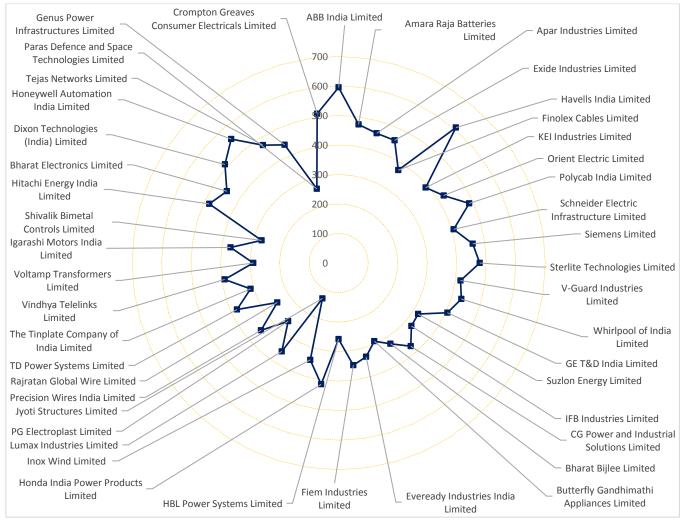

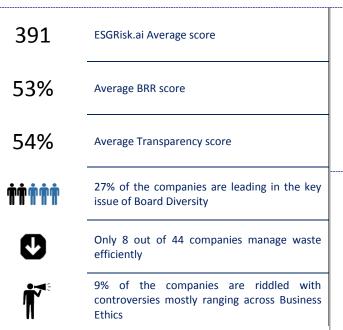

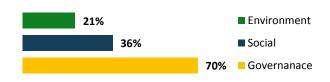

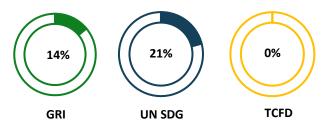

Figure: Industry Overview

# Average Environment, Social and Governance performance (in %)

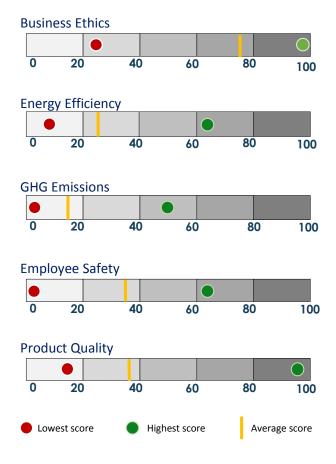

Companies following reporting standards and framework

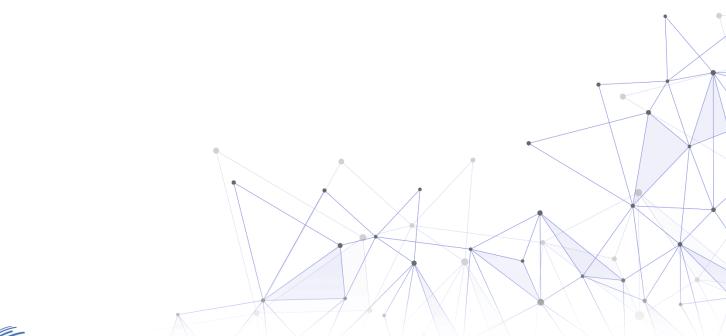

Occupation and workforce health & safety management are of primary importance to this industry as it involves exposure to noise and vibrations, material handling, collisions, crushing hazards, cutting and puncturing hazards, burn and abrasion hazards, electrical hazards, and high-pressure hazards. Environmental factors such as energy consumption is a direct function of fuels used for manufacturing of machinery. Pertinent governance issues include board independence and shareholders' rights.

#### Performance of material issues in Electrical and Electronic Equipment industry

### **Machinery and Equipment**

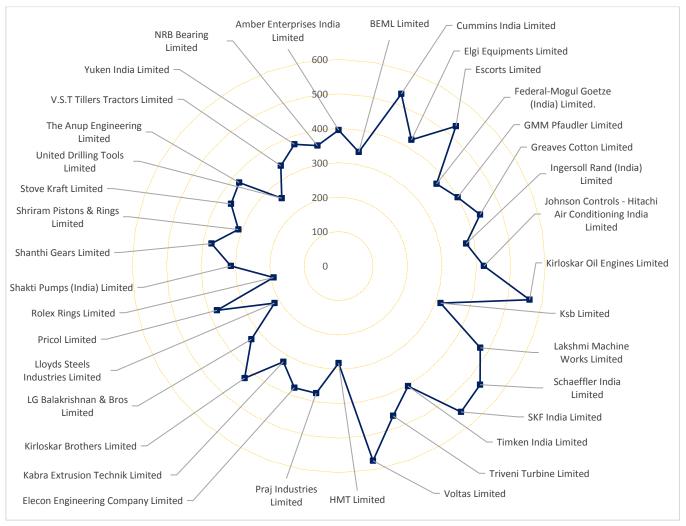

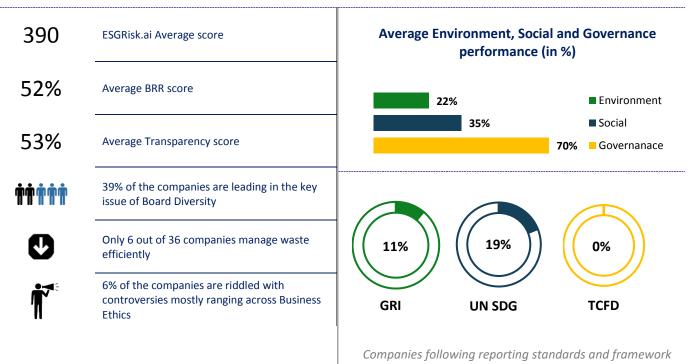

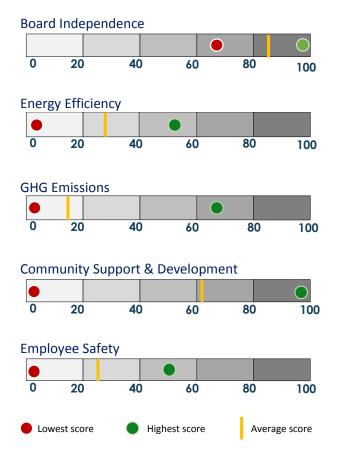

Figure: Industry Overview

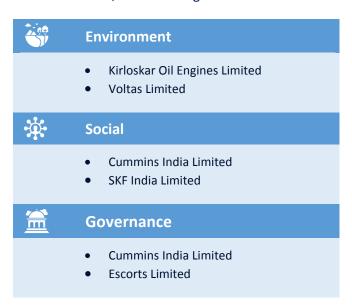

Companies in this industry are engaged in the manufacturing of machinery and electrical equipment. The manufacturing of machinery and equipment industry has a high carbon footprint. Efficient use of energy during the manufacturing process is a crucial factor. The industry's strength lies in its efficient material and water usage and in developing energy efficient products through innovative technology. Employee safety, training and retention of employees are vital for this industry. The industry should focus on key areas like corporate governance performance and adherence to business ethics. Practices related to board diversity and compensation and shareholder rights are some crucial governance issues.

#### Performance of material issues in Machinery and Equipment Industry

### **Cement and Building Materials**

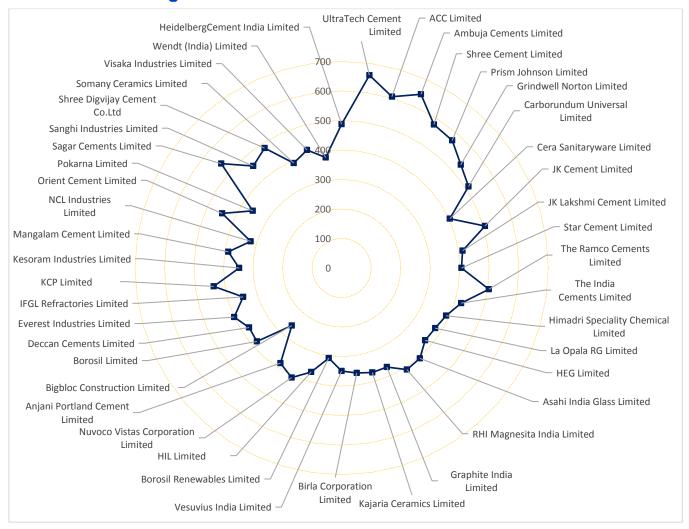

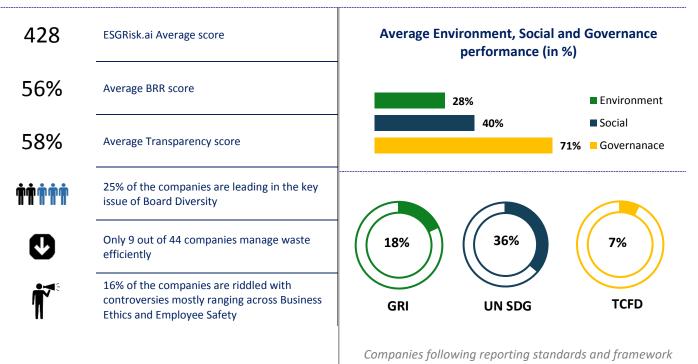

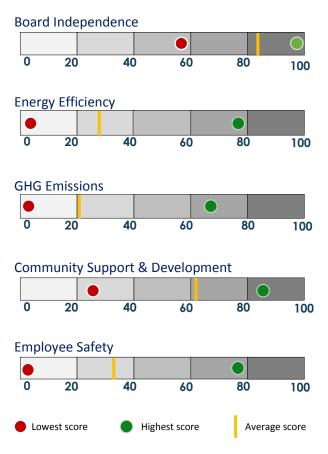

Figure: Industry Overview

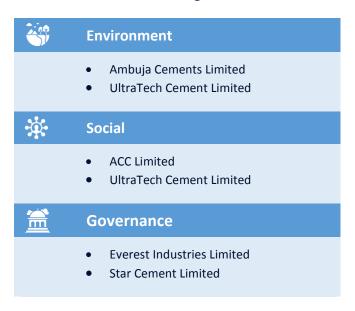

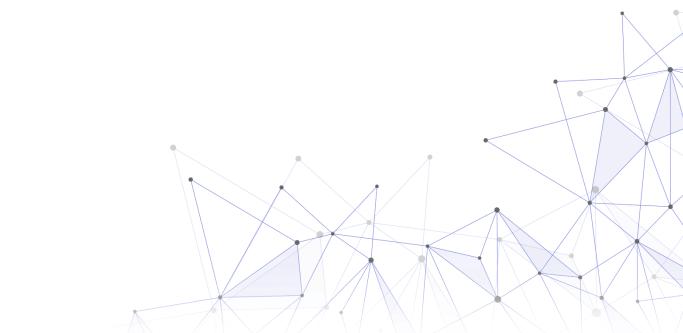

Companies in this industry are in manufacturing of cement, ceramics, glass, granites, porcelain, and other construction related materials. Cement production has a significant environmental impact. The manufacturing process for cement requires a significant amount of energy. In order to make their end-products, raw materials must be crushed and moved, resulting in greenhouse gas emissions, waste, and pollution. Labor management, human rights, occupational health and safety standards, and community development are all critical issues. Regulation compliance and ethical business practices pertaining to anti-competitive conduct by the companies are relevant governance issues.

#### Performance of material issues in Cement and Building Materials Industry

#### **Real Estate**

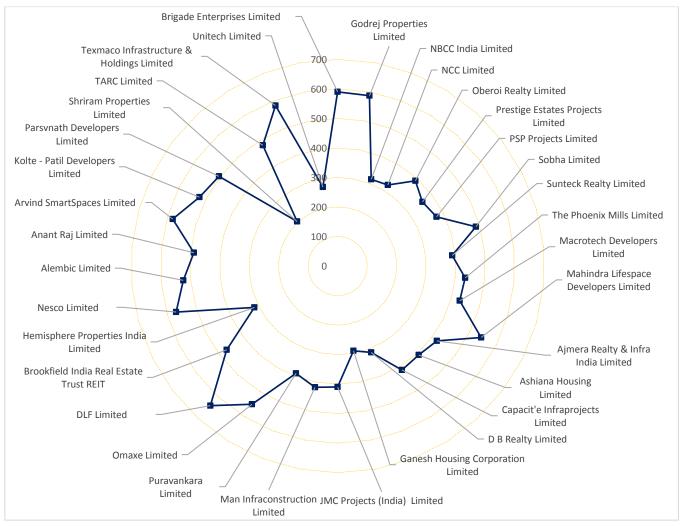

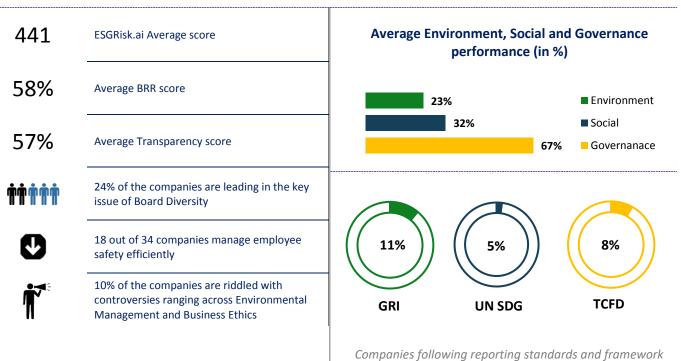

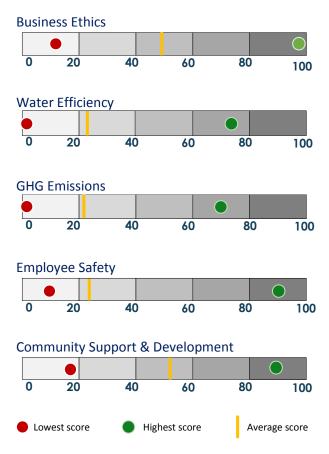

Figure: Industry Overview

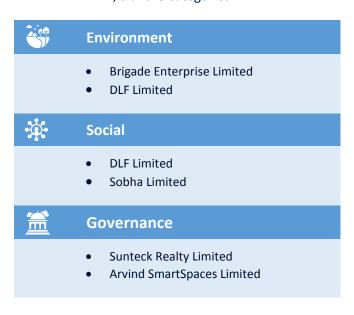

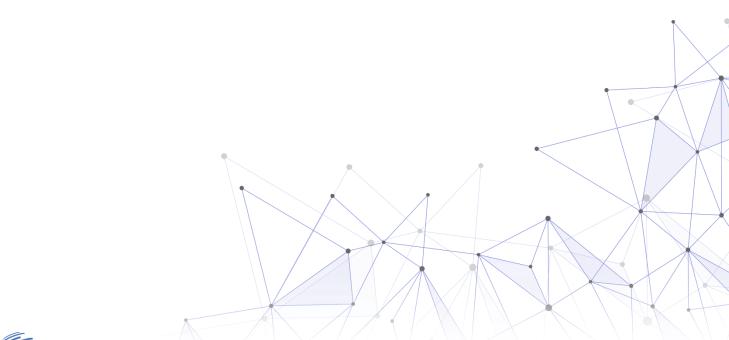

The real estate industry has high environmental footprint; waste management, energy efficiency and GHG emission measures are material issues. In the social category, community support and development, employee safety and equal opportunity are important issues. Pertinent governance issues include real estate regulatory compliances, bribery, and audit committee functioning. Companies are adopting energy efficiency and green building practices. Many real estate companies are building townships and providing facilities like sewage treatment plants, rainwater harvesting and installation of roof top solar plants for conservation of energy.

#### Performance of material issues in Real Estate Industry

# **Civil Engineering**

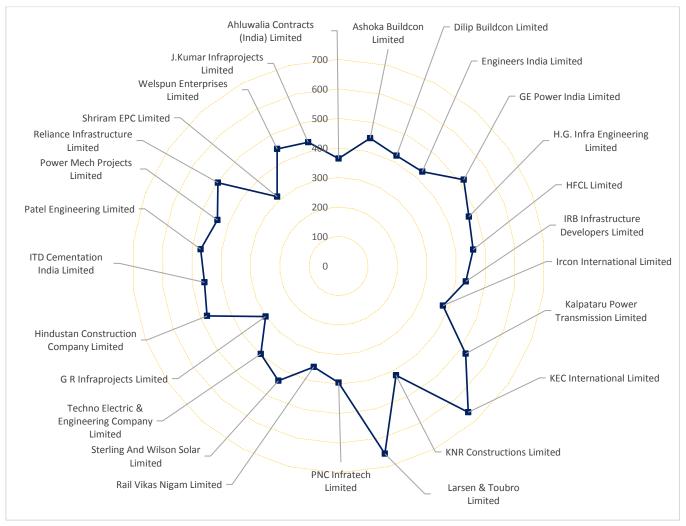

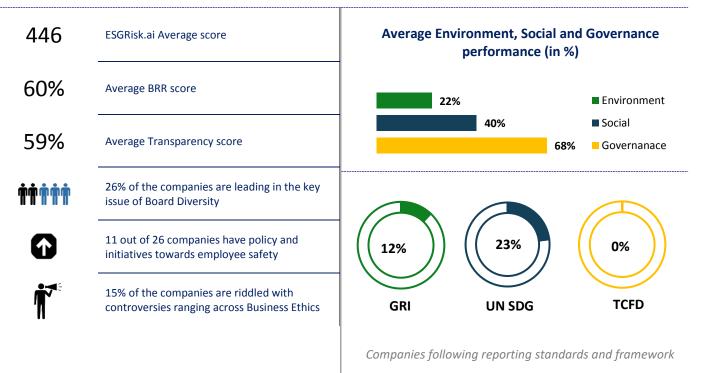

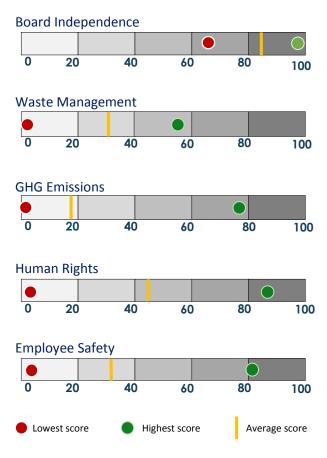

Figure: Industry Overview

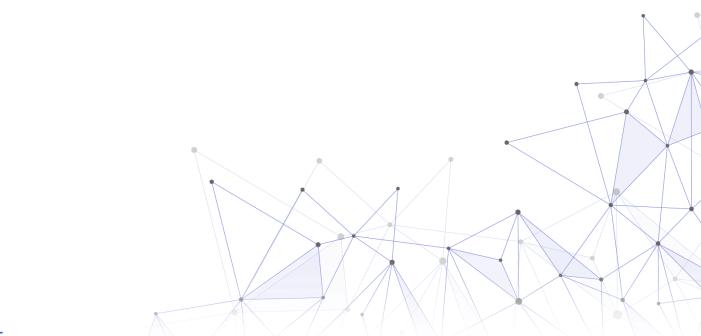

This companies in the civil engineering industry have infrastructure projects across construction, maintenance of roads, tunnels, bridges, highways and other utility projects. The civil engineering industry has a significant social impact, community support and development, employee safety and human rights play are critical issues in the social. Governance issues include board and management compensation, shareholders rights and board diversity. Scope 1 emissions, vehicle fleets and heavy machinery has considerable impact in environmental performance of civil engineering industry.

#### Performance of material issues in Civil Engineering Industry

#### **Automobile**

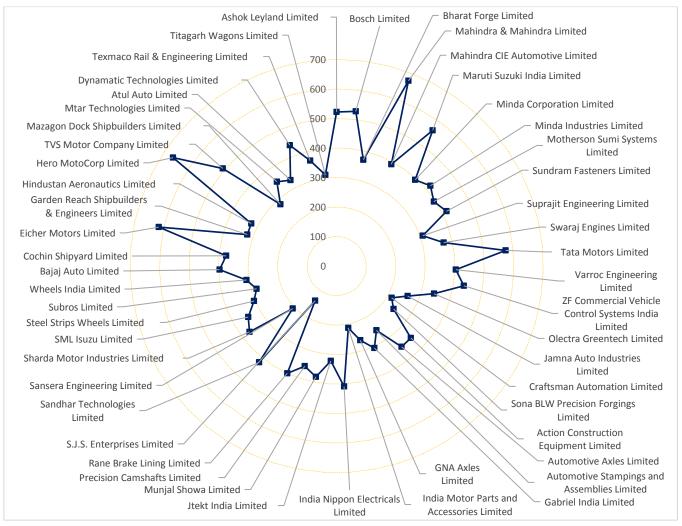

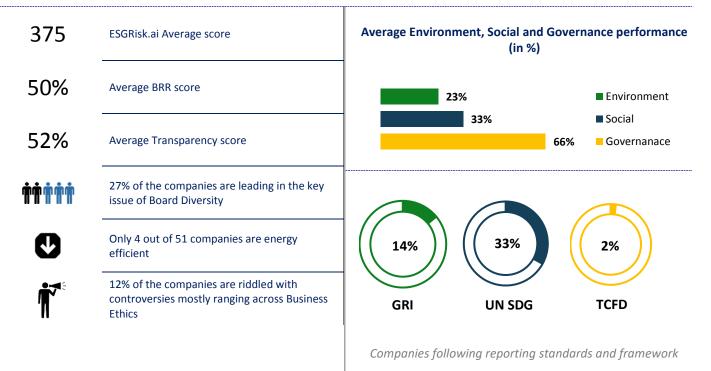

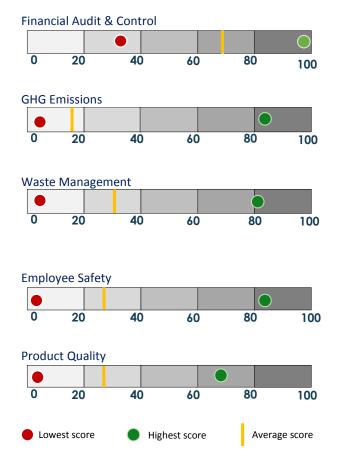

Figure: Industry Overview

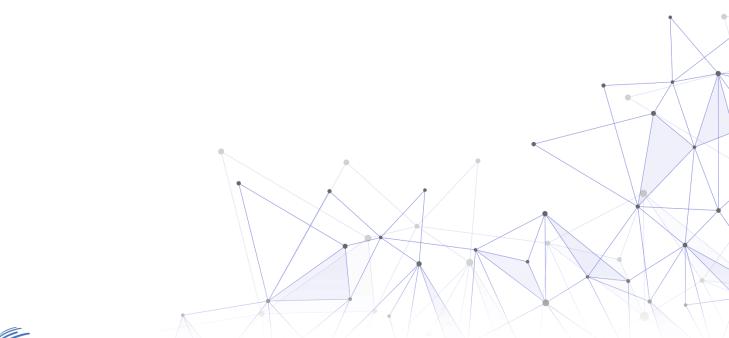

Companies in this industry are in manufacturing of automobile and its ancillary and two wheelers along with others such as three wheelers. The automobile industry has a substantial environmental impact. Manufacturing process of vehicles, batteries, auto-parts and ancillaries emit huge amounts of greenhouse gases. These manufacturing processes also generate waste such as toxic battery waste, machine lubricants & coolants and others. Labor management, human rights, occupational health and safety standards, and community development are all critical issues. Regulation compliance and ethical business practices of the companies are relevant governance issues.

# **Information Technology**

#### **Information Service Activities**

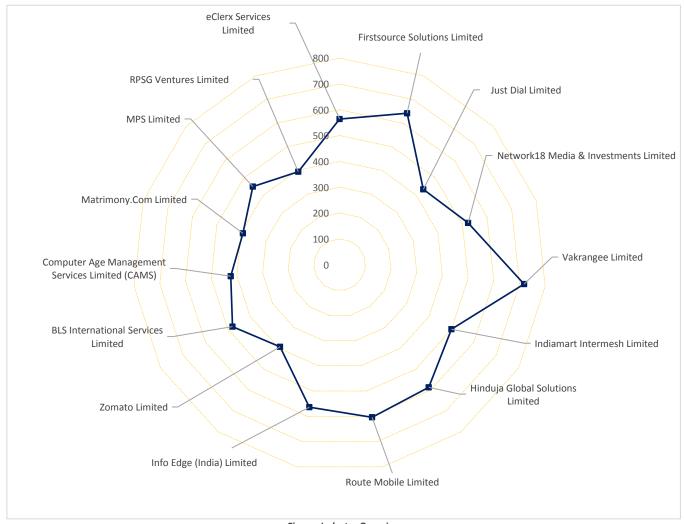

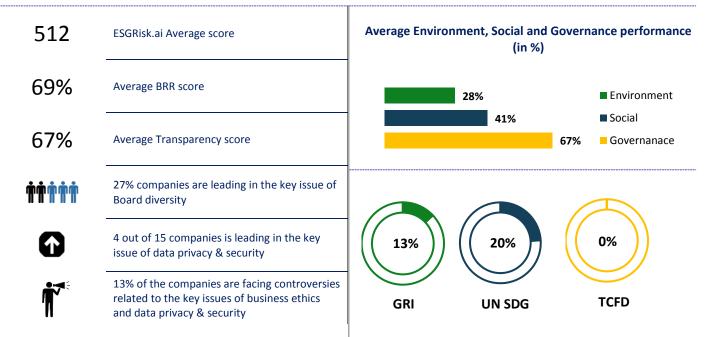

Figure: Industry Overview

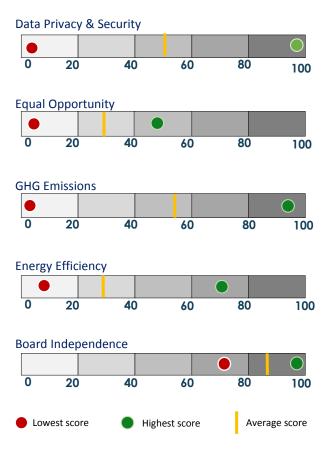

Companies following reporting standards and framework

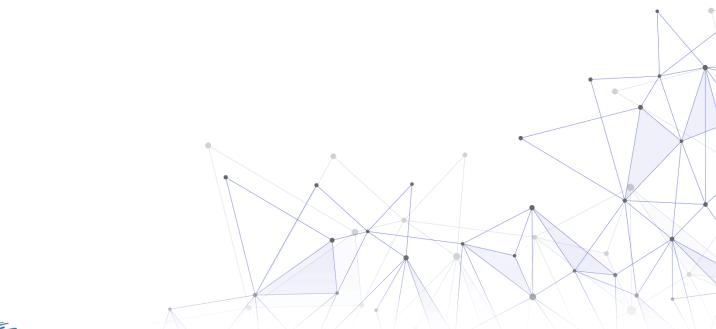

For the IT services industry, social issues like data privacy & security, human rights, and employee development are critical. Similarly, other key issues such as community support & development, employee development and product quality are critical for the information services industry. The industry's exposure to environment related risks is limited to mainly GHG emissions, energy efficiency, waste management and water efficiency. Business ethics is a primary governance concern for the information services industry. Other governance key issues like audit committee functioning, shareholder rights, financial audit & control, board diversity & independence, and management & board compensation are significant to this industry.

#### **Computer Programming**

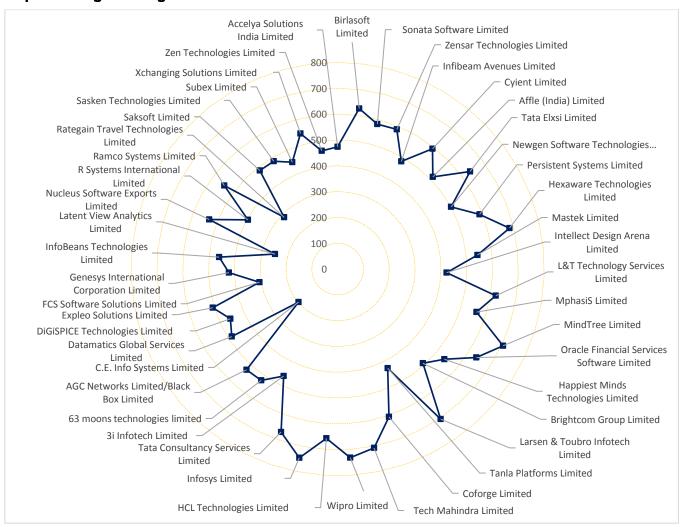

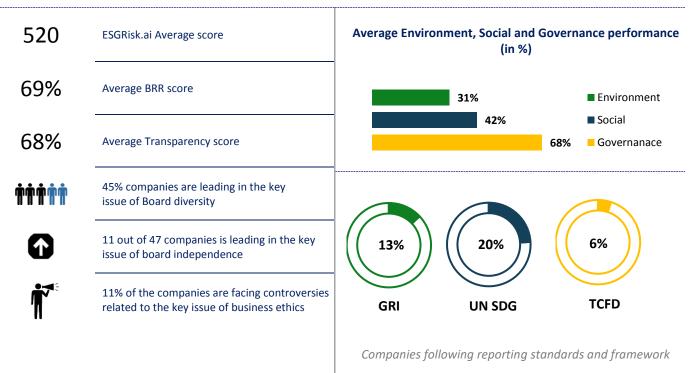

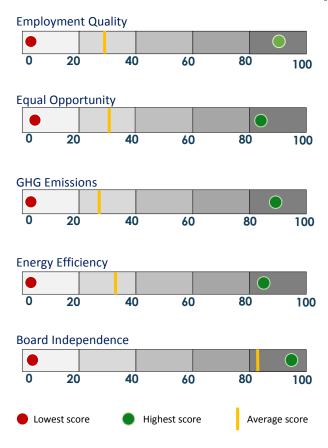

Figure: Industry Overview

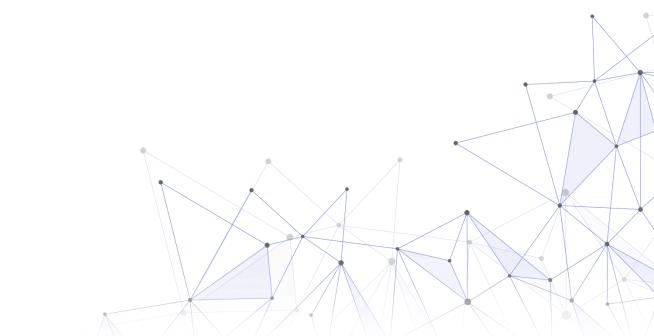

For the IT consultancy industry, social issues such as data privacy & security, human rights, and employee development are critical. The industry's exposure to environment related risks is limited to mainly GHG emissions, energy efficiency and water efficiency. The industry is susceptible to governance risks associated with regulatory compliance, board oversight, and ethical business practices. Board independence and diversity, audit committee functioning, financial audit & control, and shareholders' rights are also critical issues for this industry

#### Performance of material issues in Computer Programming industry

Top performing companies based on E, S and G categories

# **Entertainment and Broadcasting**

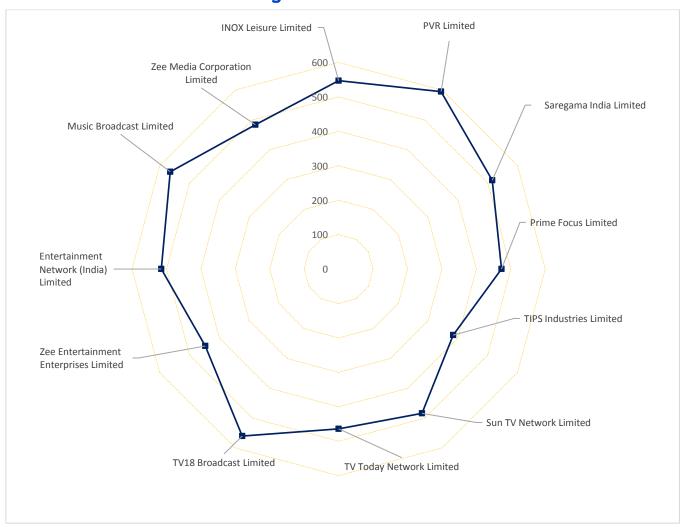

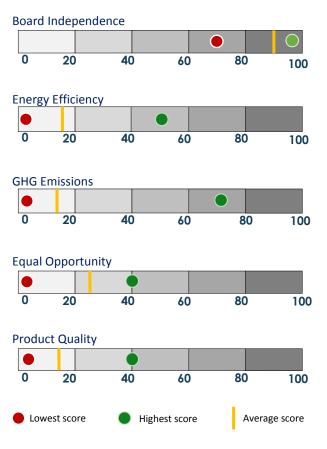

Figure: Industry Overview

This industry includes two segments- entertainment and broadcasting. In the entertainment industry, due to the nature of operations, environmental factors have a limited exposure to GHG emissions and energy efficiency holding primary importance. The film and television production industry generates carbon and greenhouse gases from travel, transportation, production material deliveries, onsite generators and even pyrotechnical scenes. The social front is underpinned by equal opportunity practices that promote diversity and inclusion, building community relations, product quality & responsibility. Complying with intellectual property rights, appropriate royalty payments, recognition and providing unbiased opinion & factual information are critical to governance practices in the entertainment industry. Companies within the industry have given nearly equal importance to their governance practices, instituting policies and strategies such as whistle-blower protection, fair competition and diversity on the board.

#### Performance of material issues in Entertainment and Broadcasting Industry

Top performing companies based on E, S and G categories

#### **Human Health Activities**

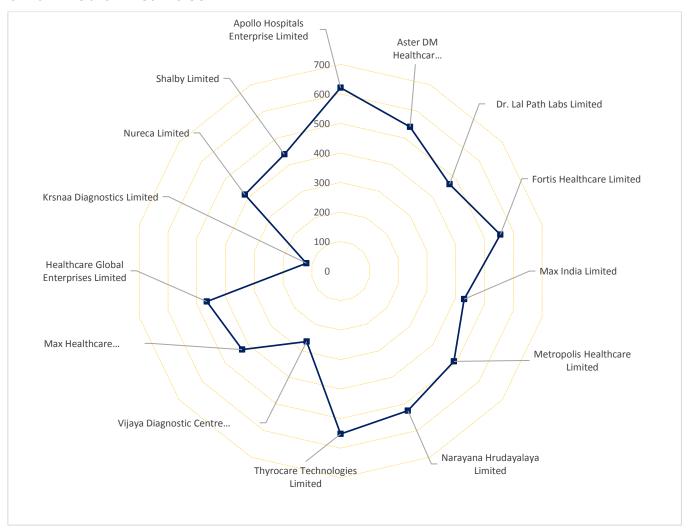

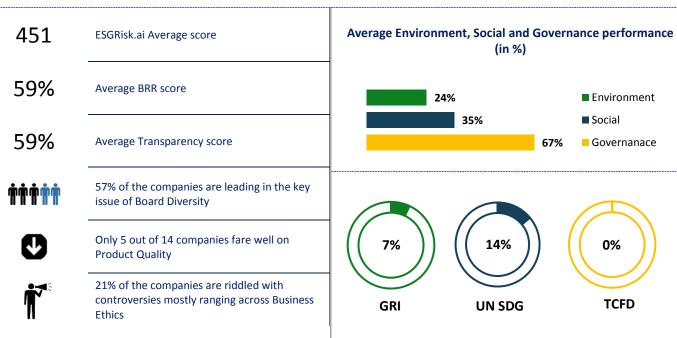

Figure: Industry Overview

Companies following reporting standards and framework

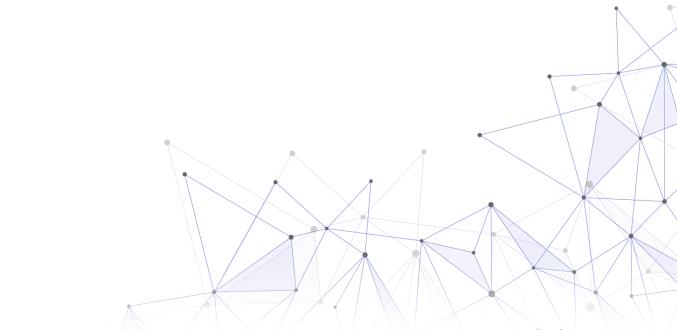

Human Health Activities comprise of hospitals, medical devices, clinical trials, outsourcing, telemedicine, medical tourism, health insurance and medical equipment. The social aspect of ESG is of utmost importance to the healthcare industry. Social issues such as employee safety & quality, equal opportunity, product safety & responsibility are critical to the healthcare industry. Pertinent governance issues for the industry include regulatory compliance, anti-competitive behaviour, and ethical business practices. Exposure of the healthcare industry to environmental risk is limited. Biomedical waste generation of this industry is high; therefore, waste management is a critical issue for the industry.

#### Performance of material issues in Human Health Activities

Top performing companies based on E, S and G categories

#### **Accommodation**

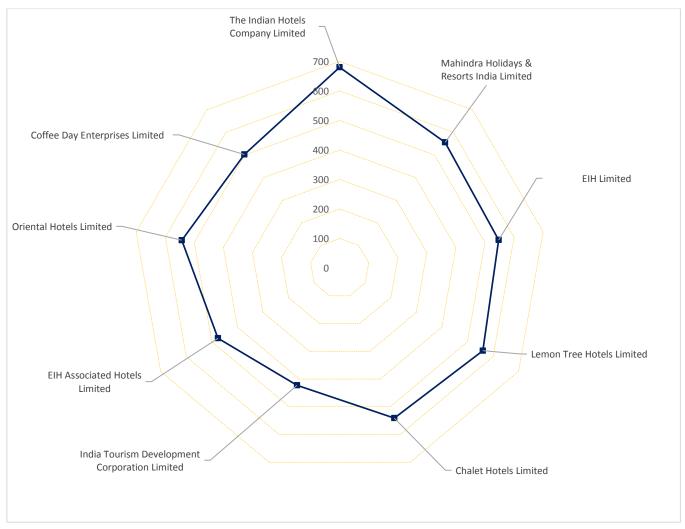

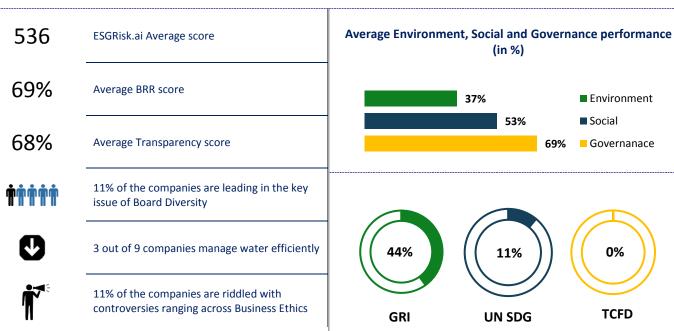

Figure: Industry Overview

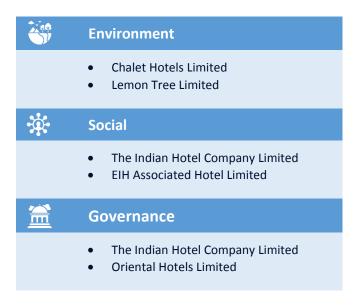

Companies following reporting standards and framework

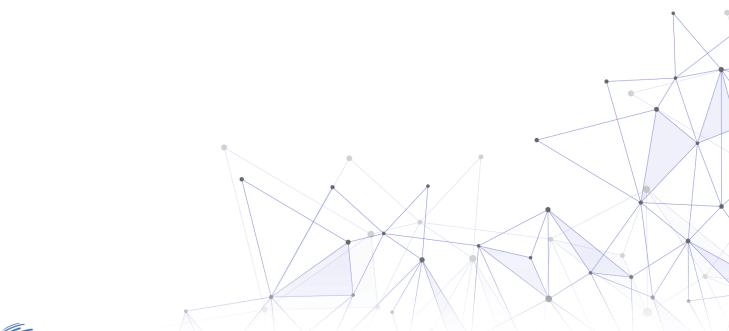

The Accommodation industry has a high environmental footprint. Waste, energy, employee safety & development and building a more equitable work environment are very crucial for the industry. From the designing and construction of hotels to the operational and financial aspects of the entity, sustainability plays an important role through sustainable buildings, responsible sourcing, and circular economy. The social risks for the accommodation industry are more weighted towards quality & safety of the product & services and providing equal opportunity.

Factors such as management compensation and board independence hold primary importance within this industry. The food products industry is inherently exposed to environmental risks. Each stage of this industry value chain from food production to processing, transportation, storage, and distribution, contributes to environmental impact. Factors like greenhouse emissions, water efficiency and air pollutant emissions are critical issues for the industry. Factors like employee safety, community support & development are material issues for the industry. Additionally, this industry places a high value on the quality, safety, and responsibility of its products, as it significantly influences customer satisfaction and behaviour.

#### Performance of material issues in food and beverage service activities

#### Other Service Industries

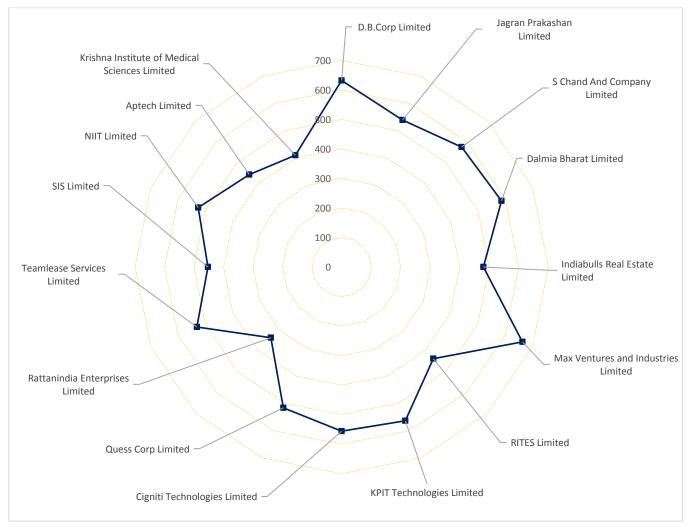

Figure: Industry Overview

The industries considered under Other Services are publishing activities, management consultancy services, head office activities, education, security & investigation activities, architecture & engineering activities, technical testing & analysis and employment activities.

Governance followed by the social category are more material to Other Services. Under governance, safeguarding board independence as well as business ethics is essential. The key issues which are the most material for Other Services under the social category include providing community support & development and equal opportunity to its employees. This industry does not have a significant impact on the environment. However, ensuring efficiency of energy is imperative for this industry.

### Other Manufacturing Industries

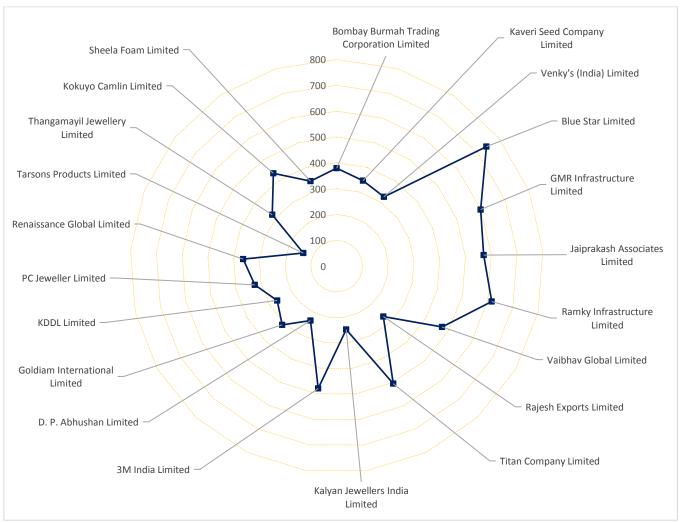

Figure: Industry Overview

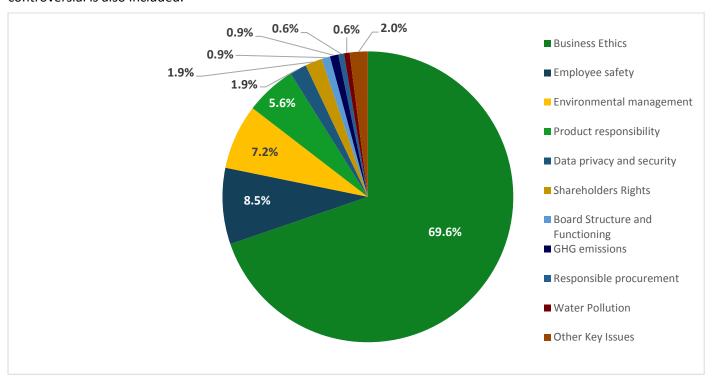

The industries considered Crop and animal production, hunting and related service activities, Specialized Construction Activities, Furniture and Other Manufacturing.

Factors such as management compensation and board independence hold primary importance within these industries. Similarly, business ethics, financial audit and control and shareholder's rights are other material issues for the industry. Employee health and safety standards, community development, product quality are pertinent social issues to these industries. The environmental risks associated with the industries are energy efficiency and GHG emissions. Issues such as water efficiency and ESG reporting transparency are also critical to the industry. The industries have substantial carbon emissions and toxic waste footprint.

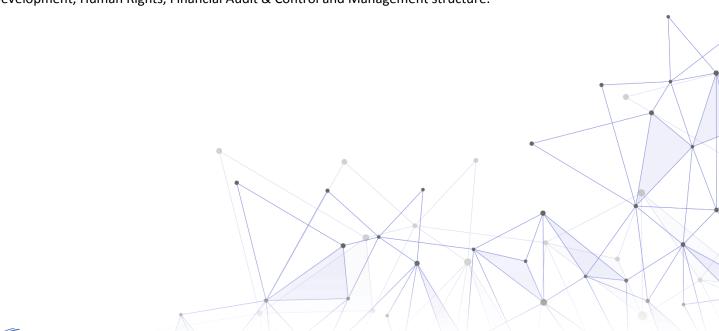

# Controversies – Critical component in ESG risk management framework

ESGRisk.ai has assessed controversies occurring in NSE 1000 companies in the financial year 2020-21 across environmental, social, and governance parameters. Additionally, a deep dive into key issues that are frequently controversial is also included.

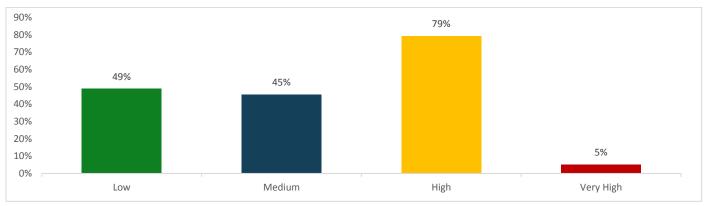

As per the analysis conducted by ESGRisk.ai, we have observed that the greatest number of failures seem to appear within the key issue of Business Ethics followed by Employee Safety and Environmental Management. Other controversies across key issues include Biodiversity impact, Product Safety, Water Efficiency, Community Support & Development, Human Rights, Financial Audit & Control and Management structure.

#### **Severity of Business Ethics Controversies**

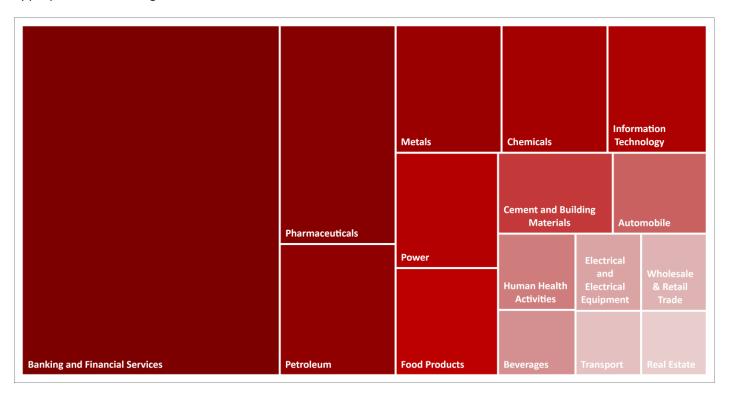

Business ethics covers a wide range of issues such as complying with SEBI listing regulations, preventing bribery and corruption, improving fair trade practices, and reporting related party transactions. In addition to a stronger regulatory environment, Indian companies must implement better internal controls, improve corporate governance practices by establishing stronger policies and introducing mechanisms and initiatives to improve performance.

We analyzed NSE 1000 companies and found controversies of various scales and sizes that fall under the environment, social, and governance categories. Such scams and scandals have a tendency to affect the company's reputation, goodwill, and have the potential to cause financial losses. The company may suffer investor losses, have difficulty attracting talent and retaining customers and reduce the value of its equities or bonds.

#### **Controversy-Prone Industries**

While Indian corporates have espoused ESG management framework, we are seeing significant failures in risk management. Among the sectors that have experienced the most controversies are Banking & Financial Services, Pharmaceuticals, and Petroleum, among others. All these controversies are occurring despite the institution of appropriate Risk Management frameworks.

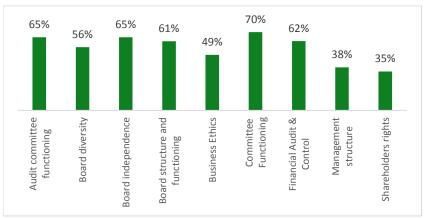

# ESG Journey of IPOs

ESGRisk.ai conducted research to analyse the change in the ESG performance of newly listed companies in the Indian market. To do so, transparency and ESG scores of 48 newly listed companies from our coverage have been undertaken. The findings show that on an average, 40% more disclosures are being undertaken by companies after being listed. Further, there has been on an average, a 50% jump in the ESG scores of most companies from 2018 to the time when they got listed. For more insights into the companies' performance in specific key issues of each category, please refer to the graphs below.

#### **Performance of New Listed Companies in Governance Category**

# Glossary

# **Abbreviations**

Term	Description
Air pollutant emissions	Air pollutant emissions covers emissions of SOx, NOx, ODS, VOC and Particulate Matter-10
BRR	Business Responsibility Report mandated by SEBI
CIN Code	Corporate Identification Number (CIN Code) – assigned by the Registrar of Companies under the Ministry of Corporate Affairs
CDM	Clean Development Mechanism
CDP	CDP was previously known as Carbon Disclosure Project. It is a not-for-profit charity that runs the global disclosure system for investors, companies, cities, states and regions to manage their environmental impacts.
СРСВ	Central Pollution Control Board (CPCB)
CSR	Corporate Social Responsibility
DP	Data point, indicators that are being assessed as part of our ESG taxonomy for their relevance to the industry and the companies performance on the same
ESG	Environmental, Social and Governance
EMAS	Certification under the European Union's (EU) Eco-management and Audit Scheme (EMAS)
FDA	Food and Drug Administration
GHG Emissions	Greenhouse gas emissions (GHG) - in the context of this report includes Carbon Dioxide, Methane, Nitrous Oxide, Sulphur Hexafluoride, Perfluorocarbons, Chlorofluorocarbons and Hydrofluorocarbons, the emissions of other gasses are captured under Air pollutant emissions.
GMO	Genetically modified organisms
GRI	Global Reporting Initiative
INR	The Indian Rupee
IUCN	The International Union for Conservation of Nature is an international organization working in the field of nature conservation and sustainable use of natural resources
KI	Key Issue pertaining to a specific theme under an ESG category
KMP	Key management personnel
LGBT	LGBT or GLBT is an initialise that stands for lesbian, gay, bisexual, and transgender

Term	Description
MT	Million tonnes
NAPCC	National Action Plan for Climate Change
NCAP	New Car Assessment Program
NGRBC	National Guidelines on Responsible Business Conduct
NOx	Nitrogen Oxides – Nitrogen dioxide and nitric oxide are referred to together as oxides of nitrogen
NVG	National Voluntary Guidelines provide a framework for responsible business behaviour along social, environmental and governance aspects
ODS	Ozone depleting substances
OHSAS 18001	Occupational Health and Safety Assessment Series (officially BS OHSAS 18001) – a British Standard for occupational health and safety management systems.
PM10	Particulate matters
SA 8000	Sustainability SA 8000 – Social Accountability Certification SA 8000 is an international certification standard that encourages organizations to develop, maintain and apply socially acceptable practices in the workplace.
Scope 1 Emission	Scope 1 greenhouse gas emissions are the emissions released to the atmosphere as a direct result of an activity, or series of activities at a facility level.
Scope 2 Emission	Scope 2 GHG emissions are indirect emissions from sources that are owned or controlled by the Agency.
SEBI	The Securities and Exchange Board of India – regulator of the securities & commodity market in India
SOx	Sulphur Oxides – Sulfur oxides (Sox) are compounds of sulphur and oxygen molecules
SPCB	State Pollution Control Boards (SPCB)
TCFD	Task Force on Climate-related Financial Disclosures
tCO2e	Tonnes (t) of carbon dioxide (CO2) equivalent €
VOC	Volatile organic compounds

# **Terms**

#### Category

The three pillars of ESG - E (Environment), S(Social), G(Governance).

#### **Quartile indication**

The company in question & the peers have been divided into 4 quartiles based on its ESG performance. Quartiles are based on mean of the total ESG scores or category specific ESG score for the industry. Ranking in the top quartile indicates good relative performance and vice versa.

#### **Benchmark**

Comparison of the company's performance with its industry peers on the same set of ESG indicators.

#### **NIC Code**

The National Industrial Classification Code (NIC Code). In the report, the 2-digit NIC code has been used for identification of peers for benchmarking. The exact peers shown in the report are based on analyst selection of most relevant companies from the two-digit NIC code.

#### **Business Responsibility Report (BRR)**

SEBI mandates top 1000 listed companies by market capitalization to file Business Responsibility Reports (BRR).

#### **National Voluntary Guidelines (NVGs)**

on social, environmental and governance released by the Ministry of Corporate Affairs in July 2011. NVGs are an aspirational and comprehensive guideline to encourage responsible business behaviour in India that is unique to India's development challenges and priorities. The NVG are the revised version of the CSR (Corporate Social Responsibility) Voluntary Guidelines 2009 that served as a statement of intent by the Government of India to encourage businesses to adopt responsible business practices.
