The ESG Yearbook
An Indian Landscape
2022
ESG as a concept has moved beyond the Boardrooms and from good to have, to one of the key differentiators – not only for investors and lenders but also for the corporates. As more and more economies are waking up to the adverse effects of climate change, poorly governed businesses, labour unrest, human rights violations, the effect of the pandemic on employment quality, etc. ESG assessments are clearly the tool to monitor the transition towards sustainability and India is not far behind in making this transition. The BRR and subsequently the BRSR guideline issued by the SEBI for the top 1000 listed companies is a landmark step in the journey.

ESGRisk.ai, India’s first ESG Rating Provider and a wholly owned subsidiary of Acuite Ratings & Research, aids this process. We assess companies based on the disclosures made by them and provide independent and unbiased ESG ratings, based on an objective framework to measure their relative performance within and across industries. ESGRisk.ai has aimed to bring discipline to an area that is struggling with a lack of standardisation, common benchmarks, and quality data. Our ESG Assessments provide corporates not only the option to monitor where they are through comprehensive assessments which consider over 1000 indicators but also provide them with relevant Indian and global benchmarks.

Through the Yearbook we bring to you a comprehensive ESG analysis of the top 1000 NSE Listed companies across 54 sectors. It also contains the list of the 21 award winners as a part of the second edition of our annual awards ceremony - ESG India Leadership Awards 2022. The ESG Yearbook is an interesting read not just for ESG experts but for investors, the financing community, business leaders, government institutions, and think tanks. India still has a long way to go to tap into its potential as an ESG-forward country but according to our estimates, the AUM invested into ESG funds is expected to grow by 30% which is quite a figure to look forward to.

Hope we are able to add value through this publication. Please share your reviews at knowledge@esgrisk.ai

- Mr. Sankar Chakraborti, Chairman, ESGRisk.ai, Group CEO, Acuite

INTRODUCTION

ESG Risk Assessments and Insights Limited (ESGRisk.ai) is India’s first ESG Rating Provider and the first to be empanelled with Association of Mutual Funds in India (AMFI) for ESG ratings of mutual funds. We have adopted an India specific assessment framework aligned with global ESG assessment standards. The company is a wholly owned subsidiary of Acuité Ratings and Research Limited and part of the Acuité Group. The Acuité Group comprises of three entities, Acuité Ratings & Research Limited, SMERA Gradings & Ratings Private Limited and ESGRisk.ai. Acuité Ratings & Research Limited is a full-service credit rating agency registered by SEBI and accredited by RBI that specializes in bank loan and bond ratings. SMERA Gradings and Ratings Private Limited is approved by Ministry of MSME & Government of India for the rating and grading of SME in India. ESGRisk.ai draws on Acuité Group’s experience in rating of more than 9,300 companies & a total of 50,000 plus SMEs. Our objective is to provide investors, companies, governments, development agencies, and research bodies access to ESG assessments and data for Indian companies.

Sustainability has become a priority for the global society with the risk landscape changing rapidly. Frequent and intense droughts, heat waves, rising sea levels, melting glaciers, warming oceans, violation of human rights and labour strikes have paved the way for the investing community to move towards socially responsible investment practices and ethical consumerism. India is one of those countries which is going to be adversely impacted with ESG related risks because of rising population burden, dependence on agriculture and long coastline. Our honourable PM has committed India to become Net Zero by 2070 and we believe that ESGRisk.ai will catalyse this sustainable transformation by encouraging responsible businesses.
Having launched our first product in June 2021, we successfully rated top NSE 500 companies, and have since expanded our portfolio to top NSE 1000 companies. Our ESG rating is an objective, independent & unbiased opinion on a company’s ability to manage future/emerging risks on Environment, Social, & Governance issues that have material financial impact. Our rating methodology evaluates a company’s ESG performance across 3 categories, 19 themes, 35 key issues and 1000 indicators. Our assessments are based on company’s public disclosures.

Several organizations have actively embraced ESG, but it is important that the corporate sustainability story be communicated to their stakeholders, as not only will this drive the ESG journey, but also inspire others. Our assessment indicates that the average ESG disclosure rate of NSE 1000 companies is 58%, while the highest ESG disclosure rate stands at 94%.

To celebrate the growth of Indian companies in the ESG space, ESGRisk.ai, is presenting the ESG India Leadership Awards 2022. Our 21 ESG award categories (covering Environment, Social, Governance, Transparency and overall ESG performance) ensure that organizations achieving excellence through their ESG practices are honoured. The awardees are chosen after evaluating top 1000 listed companies through a meticulous and rigorous process. A special category award for Transparency is given to the company for disclosing maximum information in terms of their sustainability practices. The awards are purely based on ESG performance of the companies and winners did not have to nominate themselves (or pay a fee) to get evaluated for the awards.
The ESG Yearbook 2022

- 54 Industries
- 1,000 Companies
- 1,000 Indicators
- 14,000 Calculations per Company
- 19,140,000 Indicators Collected
**Did You Know?**

**CEMENTS**
Only top 5 cement companies disclose their progress on SOx, NOx, and PM10 emission reduction.

**CHEMICALS**
Only 6 out of 108 companies conduct product safely testing.

**PHARMACEUTICALS**
51 out of 63 companies provide information on safe usage, but only 10 disclose their hazardous waste.

**FINANCE**
Women representation in the workforce remain as low as 21%.

**PETROLEUM**
6 out of 19 companies report on scope 1 and scope 2 GHG emission.

**INFORMATIVE SERVICES**
70% & 63% of the companies comply with ISO 27000 certification and GDPR guidelines respectively.

**AUTOMOBILES**
Only 2 out of 38 companies has sought GNCAP certification for its vehicles.

**POWER**
44% companies have a biodiversity restoration program and 15% have operations in IUCN Red List.

**REAL ESTATE**
Not more than 27% of the companies promote the use of recycled material.

**METALS**
48% companies have measures to reduce SOx, NOx, VOC’s and PM10 emission.

**TEXTILES**
Despite 55% of companies taking measures to reduce water use, only 1 practices recycling.
Comprehensive ESG assessment

ESGRisk.ai’s ESG Ratings have been developed to help investors understand a company’s ESG performance and link it to the investor’s portfolio risk. Our ESG ratings are a summary of financially material ESG factors. The rating report provides the performance on all these factors. Our ratings and the rating report can be used for portfolio construction and management as well as for ESG performance comparisons and benchmarking.

Understanding ESGRisk.ai’s ESG data taxonomy

A comprehensive ESG assessment requires identifying all material ESG risks and evaluating the company’s risk management practices to proactively address these risks. Since every company has exposure to a wide variety of risks and each risk impacts a company to varying degrees, the evaluation of exposure and scoring of the risk management process has to be structured in a hierarchy where individual indicators pertaining to the risk exposure and management can be aggregated to evaluate the performance. ESGRisk.ai aggregates data in three levels, viz.: The Key Issue, Theme and Category level, each of which is the next level of aggregation for hierarchical risk evaluation.

ESGRisk.ai’s ESG ratings are based on three categories, 19 themes with – 9 in Environment, 4 in Social and 6 in Governance. The performance on these 19 themes are assessed by measuring the strategy, performance and results on 35 Key Issues and ~1000 indicators. ESGRisk.ai bases its ESG assessments on company disclosures and publicly available information. Information sources such as the company’s website, annual reports, CSR/sustainability reports, notice for meetings, vote results as well as local and global NGO and news websites are being used to assess the company’s performance on ESG issues.

Companies with biannual reporting are rated on the basis of their last year’s disclosures. However, in the following rating cycle if they do not disclose their sustainability practices, then we do not consider initiatives and strategies adopted in the previous year.
The materiality and relevance of environmental and social indicators vary across industries. Since not all indicators are relevant to every industry, ESGRisk.ai has identified the industry applicability of each indicator. Not all indicators are equally material to all industries. Hence for assessments, weights corresponding to the indicator’s materiality in a specific industry are assigned. They range from very high materiality to marginal material.

ESGRisk.ai materiality and relevancy framework ensure a company’s score is not negatively impacted if the company does not disclose their risk management framework on issues that are not considered material to that specific industry. Vice versa, the company’s score is adversely impacted if it does not report on issues that are material.

Subsequently, indicators in each category are assigned a polarity to denote if their high-performance indicator represents good or poor risk management. For example, in the environmental category, answering “yes” to nuclear production or “yes” to animal testing in the social category have a negative polarity. However, answering “yes” to policies or initiatives and targets to reduce nuclear waste and animal testing have a positive polarity.
Scoring according to company’s ESG disclosures and transparency

Based on the company’s disclosure of indicators, ESGRisk.ai will compute and publish two transparency scores, one will score the level of overall disclosures and the second will score the BRR disclosures, relevant largely in the Indian context. Business Responsibility Reporting (BRR) transparency score is based on indicators that correspond with BRR disclosures.

Scoring negative news

Negative news/controversies are unfailing indicators of the gaps in an issuer’s risk management framework. The inability to foresee and manage a risk is starkly evident when the company faces controversies arising from its inability to address adverse events when they are encountered in the normal course of business. Negative news/controversies have varied levels of impact and the issuers themselves have varying approaches to manage adverse events. ESGRisk.ai’s model evaluates the fragility of the risk management framework based on the magnitude of the controversy’s impact.

Scores – Rating Scale

Finally, based on the above steps, ESGRisk.ai assign scores and provides ratings

As we know the Corporates in India are recognising their social and environmental impact and have taken numerous initiatives to mitigate or manage ESG risks. ‘ESG India Leadership Awards’ – is an initiative of ESGRisk.ai to celebrate achievements in ESG risk management. To identify award recipients ESGRisk.ai employed a rigorous evaluation framework and to eliminate all bias, identified and appointed an independent jury, which was tasked to independently recommend award categories and develop the award framework.

To qualify as a Jury member, experts could not be affiliated with any of the corporates being evaluated, had to have ESG expertise and needed an understanding of the best sustainability practices across the globe.

The Jury met numerous times over a period of four weeks to finalize the methodology and identify the winners in each award category. The jury members agreed to use four sequential steps, to identify the winners.

1. In step 1, the jury identified material ESG issues for each sector and based on these material risk issues identified the award categories. Only companies exposed to a specific risk would be considered for the award. For example, Data privacy and security is not a material risk in the manufacturing sector and hence only companies in the service sector were considered for this award category. The Jury during internal discussions recognized that a few companies maybe leaders in managing multiple ESG risks and recommended category specific and overall leadership awards. The Jury members also opined that an award recognising ESG transparency will encourage disclosures, and this was accepted and instituted by ESGRisk.ai.

2. In step 2, the Jury identified the list of companies eligible for each award category from the universe of the top 1000 listed companies (by market capitalization). In this step, the jury did not know how any company fared on their ESG risk management. The company’s performance was to be evaluated only after it made the shortlist for a category.

3. In step 3, the ESG risk management capability of each company in the shortlist was evaluated using ESGRisk.ai’s assessment framework, which considers risk management strategy, ESG initiatives targets used by the company to track their performance and the performance on their internally identified targets. Leaders in each category were identified based on their scores.

4. In the final step, the leaders were screened for controversies or negative news that belies their performance in an award category.

The final list of award winners was then compiled by the Jury and presented to ESGRisk.ai’s management, which also learned about the winners only from the Jury. None of the Jury members were paid by ESGRisk.ai or in any manner influenced by the companies evaluated for the awards. The awardees did not have to nominate themselves (or pay a fee) to be considered for the awards.

In summary, ESGRisk.ai’s awards are not only fair, independent and unbiased, but also ascertained using a rigorous methodology applied transparently by a committee of industry experts.

Transparency scores are based on the actual disclosures by the company. The average transparency score in service industry is 63% whereas in the manufacturing sector it is 55%.
The above graph depicts the percentage change in transparency scores from FY19-20 to FY20-21 across industries. Green represents an increase in transparency scores and blue represents a decrease in transparency scores as compared to the previous financial year. The transparency score of textile industry has witnessed a significant increase, followed by IT services industry and paper & paper products industry. Industries such as civil engineering, automobile, beverages, telecommunications and basic metals can disclose relevant information to improve their transparency scores.

Factors such as ethical business practices, management compensation and board administration hold primary importance within this industry. Likewise, regulatory compliance and audit control are other material issues. Metal manufacturing also has a substantial environmental impact. Most of the steel is still produced with blast furnaces, releasing large amounts of greenhouse gases and other air pollutants into the air. Occupational health and safety management plays an important role in the metals industry due to exposure to hazardous chemicals, electricity, steam, working at height, working in confined spaces, etc. Community relations, inclusive development, and human rights concerns are other critical factors to consider. Furthermore, product quality, as well as supply chain management, are essential.

Manufacturing of fabricated metal products industry is exposed to risks associated with regulatory compliance and ethical business practices. Additionally, board oversight, committee functioning, financial audit and shareholders’ rights are other material issues for this industry. The industry is also exposed to a variety of environment related risks. Material risks include releasing greenhouse gases & air pollutants. Waste management, sustainable supply chain, water & energy efficiency and resource efficiency are significant environmental issues for this industry. Occupational health & safety, product quality & safety, responsible procurement and human rights are crucial risks in the manufacturing of metal products industry.

Mining has a major impact on the environment. The processes of the industry are prone to release toxic elements in its surroundings impacting land, biodiversity, and water bodies. Other issues include achieving energy efficiency while mitigating ecological impact. Health and safety management is a key risk for the mining of the metal ores industry due to the usage of large and dangerous equipment. Governance factors such as ethical business practices, legal & regulatory compliance, board & management oversight are primary risks for this industry.

The petroleum industry includes companies from exploration of crude petroleum & natural gas and refined petroleum products. The petroleum industry has a substantial environmental impact. Upstream operations of the petroleum industry can cause leaking or spilling of oil while deep sea drilling and can negatively impact the biodiversity. Toxic waste management and reducing greenhouse gas emissions as well as air pollution in the form of NOx and SOx are critical issues for the downstream operations. Labour management, occupational health and safety standards and community development are critical to improve social aspects. Following a regulatory compliance and ethical business practices are pertinent for good governance.

Companies in this industry operate in power generation, transmission and distribution, gas distribution and renewable energy. The power industry has a substantial environmental footprint. Thermal power generating companies emit massive amounts of greenhouse gases and have a negative impact on biodiversity in the surrounding area. Energy management and reducing air pollution in the form of NOx and SOx are important issues for the power sector. Management of labor and maintaining health and safety standards at workplace are some of the other critical issues in this industry. Regulatory compliance and ethical business practices are critical governance issues. Due to proximity to local communities, power generation often plays a key role in increasing job opportunities in the economy.

The textile industry is the second largest polluter in the world. It is responsible for almost 10% of global annual carbon emissions. The process of boiling, scouring, bleaching or dyeing requires huge amount of water, hence water management is important for this industry. Wastewater released by this industry contains toxic substances such as lead, mercury, and arsenic, among others. Occupational hazards such as use of heavy machinery and chemicals, material handling, as well as asphyxiation caused due to fibre & cotton dust inhalation make employee safety a key issue for this industry. Additionally, factors such as management compensation, board diversity and independence are material issues.

Rubber & Plastic industry is a major contributor to greenhouse gas emissions. Both industrial and consumer scrap are of concern for this industry. The common waste generated are rubbers or thermoplastics. Other material issues are environmental management and community services. Occupational health and safety concerns in tyre manufacturing facilities have always been and continue to be of the utmost importance.

Companies in this industry are in manufacturing of cigarettes, cigarette tobacco, catechu (Katha) and chewing lime. The tobacco products industry is inherently exposed to social risks. Employee safety is a material issue for this industry as employees are primarily exposed to green tobacco sickness, hazardous chemicals and pesticides used in tobacco farms. Responsible marketing, product safety & certifications and product labelling are critical to this industry. Additionally, issues such as greenhouse gases emissions and proper disposal of waste are material. Pertinent governance issues include business ethics, management compensation and board independence.

Organic & inorganic chemicals, speciality chemicals, alkalis, agro-chemicals etc are part of chemical industry. The operation of the chemical industry has a negative impact on the environment due to the risks arising from their exposure to waste, air pollution caused by release of NOx and SOx, toxicity and hazardous elements. Health & safety of laborers, product safety and maintaining product quality are critical issues. Relevant governance issues include regulations with respect to bribery, money laundering and patent protection.

The pharmaceutical industry has a substantial impact on the social category followed by the environment category. Employee health & safety management is of primary importance to this industry. Product safety and quality are also important risks in this industry, non-adherence to these may lead to multiple recalls and consumer complaints. The pharmaceutical industry is inherently exposed to risks such as releasing greenhouse gases into the atmosphere, air impurities and polluting water bodies by releasing hazardous substances. Factors such as ethical business practices, management compensation and board administration hold primary importance for the pharmaceutical industry.

Companies following reporting standards and framework
The wood and wooden products industry consists of companies manufacturing plywood, laminboard, particle board and other plywood products. This industry is inherently exposed to environmental risks. Environmental issues primarily include solid waste disposal, air pollutant emission, veneer dryer emission, glue waste disposal and wastewater discharge. The effect caused by wood harvesting and logging, includes loss of biodiversity, soil erosion and desert encroachment. A wide array of cutting, sizing, re-sawing, edging, creates wood wastes in this industry. Waste management, reducing greenhouse gas emissions as well as air pollution are critical issues for this industry. Labour management, occupational health and safety standards and community development are important issues in the social category. Pertinent governance issues include ethical business practices, management compensation and independent board.

The leather industry includes companies that manufacture luggage & travel accessories and footwears. Manufacturing of leather products has a substantial environmental impact. The tanning process is energy-intensive, and the effluent contains a high level of carbon dioxide, nitrogen oxides, and sulphur oxides. The management of waste is a critical issue for this industry since the waste produced by this industry if left untreated causes pollution problems for the environment. Labour management, occupational health and safety standards, human rights and community development are important issues in the social category. Pertinent governance issues include regulatory compliance and ethical business practices.

Companies in this industry are engaged in the manufacturing of machinery and electrical equipment. The manufacturing of machinery and equipment industry has a high carbon footprint. Efficient use of energy during the manufacturing process is a crucial factor. The industry’s strength lies in its efficient material and water usage and in developing energy efficient products through innovative technology. Employee safety, training and retention of employees are vital for this industry. The industry should focus on key areas like corporate governance performance and adherence to business ethics. Practices related to board diversity and compensation and shareholder rights are some crucial governance issues.

Companies in this industry are in manufacturing of cement, ceramics, glass, granites, porcelain, and other construction related materials. Cement production has a significant environmental impact. The manufacturing process for cement requires a significant amount of energy. In order to make their end-products, raw materials must be crushed and moved, resulting in greenhouse gas emissions, waste, and pollution. Labor management, human rights, occupational health and safety standards, and community development are all critical issues. Regulation compliance and ethical business practices pertaining to anti-competitive conduct by the companies are relevant governance issues.

Figure: Industry Overview
Companies in this industry are in manufacturing of automobile and its ancillary and two wheelers along with others such as three wheelers. The automobile industry has a substantial environmental impact. Manufacturing process of vehicles, batteries, auto-parts and ancillaries emit huge amounts of greenhouse gases. These manufacturing processes also generate waste such as toxic battery waste, machine lubricants & coolants and others. Labor management, human rights, occupational health and safety standards, and community development are all critical issues. Regulation compliance and ethical business practices of the companies are relevant governance issues.

This industry includes two segments—entertainment and broadcasting. In the entertainment industry, due to the nature of operations, environmental factors have a limited exposure to GHG emissions and energy efficiency holding primary importance. The film and television production industry generates carbon and greenhouse gases from travel, transportation, production material deliveries, onsite generators and even pyrotechnical scenes. The social front is underpinned by equal opportunity practices that promote diversity and inclusion, building community relations, product quality & responsibility. Complying with intellectual property rights, appropriate royalty payments, recognition and providing unbiased opinion & factual information are critical to governance practices in the entertainment industry. Companies within the industry have given nearly equal importance to their governance practices, instituting policies and strategies such as whistle-blower protection, fair competition and diversity on the board.

Factors such as management compensation and board independence hold primary importance within this industry. The food products industry is inherently exposed to environmental risks. Each stage of this industry value chain from food production to processing, transportation, storage, and distribution, contributes to environmental impact. Factors like greenhouse emissions, water efficiency and air pollutant emissions are critical issues for the industry. Factors like employee safety, community support & development are material issues for the industry. Additionally, this industry places a high value on the quality, safety, and responsibility of its products, as it significantly influences customer satisfaction and behaviour.

Companies following reporting standards and framework
The warehousing industry includes companies having operations in warehousing, logistics and transportation. In this industry, governance parameters are significant that include regulatory compliance, ethical business practice, board & management compensation along with board diversity and independence. GHG emissions caused by lighting, heating, cooling and air conditioning in storage and warehousing has significant environmental impact. Employee safety and human rights are important issues pertaining to social category.

Performance of material issues in Warehousing industry

Top performing companies based on E, S and G categories

**Environment**
- Adani Ports and Special Economic Zone Limited
- Mahindra Logistics Limited

**Social**
- TCI Express Limited
- Mahindra Logistics Limited

**Governance**
- Navkar Movers Limited
- Snowman Logistics Limited
Other Service Industries

The industries considered under Other Services are publishing activities, management consultancy services, head office activities, education, security & investigation activities, architecture & engineering activities, technical testing & analysis and employment activities.

Governance followed by the social category are more material to Other Services. Under governance, safeguarding board independence as well as business ethics is essential. The key issues which are the most material for Other Services under the social category include providing community support & development and equal opportunity to its employees. This industry does not have a significant impact on the environment. However, ensuring efficiency of energy is imperative for this industry.
The industries considered Crop and animal production, hunting and related service activities, Specialized Construction Activities, Furniture and Other Manufacturing.

Factors such as management compensation and board independence hold primary importance within these industries. Similarly, business ethics, financial audit and control and shareholder’s rights are other material issues for the industry. Employee health and safety standards, community development, product quality are pertinent social issues to these industries. The environmental risks associated with the industries are energy efficiency and GHG emissions. Issues such as water efficiency and ESG reporting transparency are also critical to the industry. The industries have substantial carbon emissions and toxic waste footprint.
ESGRisk.ai has assessed controversies occurring in NSE 1000 companies in the financial year 2020-21 across environmental, social, and governance parameters. Additionally, a deep dive into key issues that are frequently controversial is also included.

As per the analysis conducted by ESGRisk.ai, we have observed that the greatest number of failures seem to appear within the key issue of Business Ethics followed by Employee Safety and Environmental Management. Other controversies across key issues include Biodiversity impact, Product Safety, Water Efficiency, Community Support & Development, Human Rights, Financial Audit & Control and Management structure.
Business ethics covers a wide range of issues such as complying with SEBI listing regulations, preventing bribery and corruption, improving fair trade practices, and reporting related party transactions. In addition to a stronger regulatory environment, Indian companies must implement better internal controls, improve corporate governance practices by establishing stronger policies and introducing mechanisms and initiatives to improve performance.

We analyzed NSE 1000 companies and found controversies of various scales and sizes that fall under the environment, social, and governance categories. Such scams and scandals have a tendency to affect the company’s reputation, goodwill, and have the potential to cause financial losses. The company may suffer investor losses, have difficulty attracting talent and retaining customers and reduce the value of its equities or bonds.

**Controversy-Prone Industries**

While Indian corporates have espoused ESG management framework, we are seeing significant failures in risk management. Among the sectors that have experienced the most controversies are Banking & Financial Services, Pharmaceuticals, and Petroleum, among others. All these controversies are occurring despite the institution of appropriate Risk Management frameworks.
ESGRisk.ai conducted research to analyse the change in the ESG performance of newly listed companies in the Indian market. To do so, transparency and ESG scores of 48 newly listed companies from our coverage have been undertaken. The findings show that on an average, 40% more disclosures are being undertaken by companies after being listed. Further, there has been on an average, a 50% jump in the ESG scores of most companies from 2018 to the time when they got listed. For more insights into the companies’ performance in specific key issues of each category, please refer to the graphs below.

**Performance of New Listed Companies in Governance Category**

For more insights into the companies’ performance in specific key issues of each category, please refer to the graphs.

Terms

Category
The three pillars of ESG - E (Environment), S(Social), G(Governance).

Quartile indication
The company in question & the peers have been divided into 4 quartiles based on its ESG performance. Quartiles are based on mean of the total ESG scores or category specific ESG score for the industry. Ranking in the top quartile indicates good relative performance and vice versa.

Benchmark
Comparison of the company’s performance with its industry peers on the same set of ESG indicators.

NIC Code
The National Industrial Classification Code (NIC Code). In the report, the 2-digit NIC code has been used for identification of peers for benchmarking. The exact peers shown in the report are based on analyst selection of most relevant companies from the two-digit NIC code.

Business Responsibility Report (BRR)
SEBI mandates top 1000 listed companies by market capitalization to file Business Responsibility Reports (BRR).

National Voluntary Guidelines (NVGs)
on social, environmental and governance released by the Ministry of Corporate Affairs in July 2011. NVGs are an aspirational and comprehensive guideline to encourage responsible business behaviour in India that is unique to India’s development challenges and priorities. The NVG are the revised version of the CSR (Corporate Social Responsibility) Voluntary Guidelines 2009 that served as a statement of intent by the Government of India to encourage businesses to adopt responsible business practices.
